

1.1 Site Diagnosis through Data

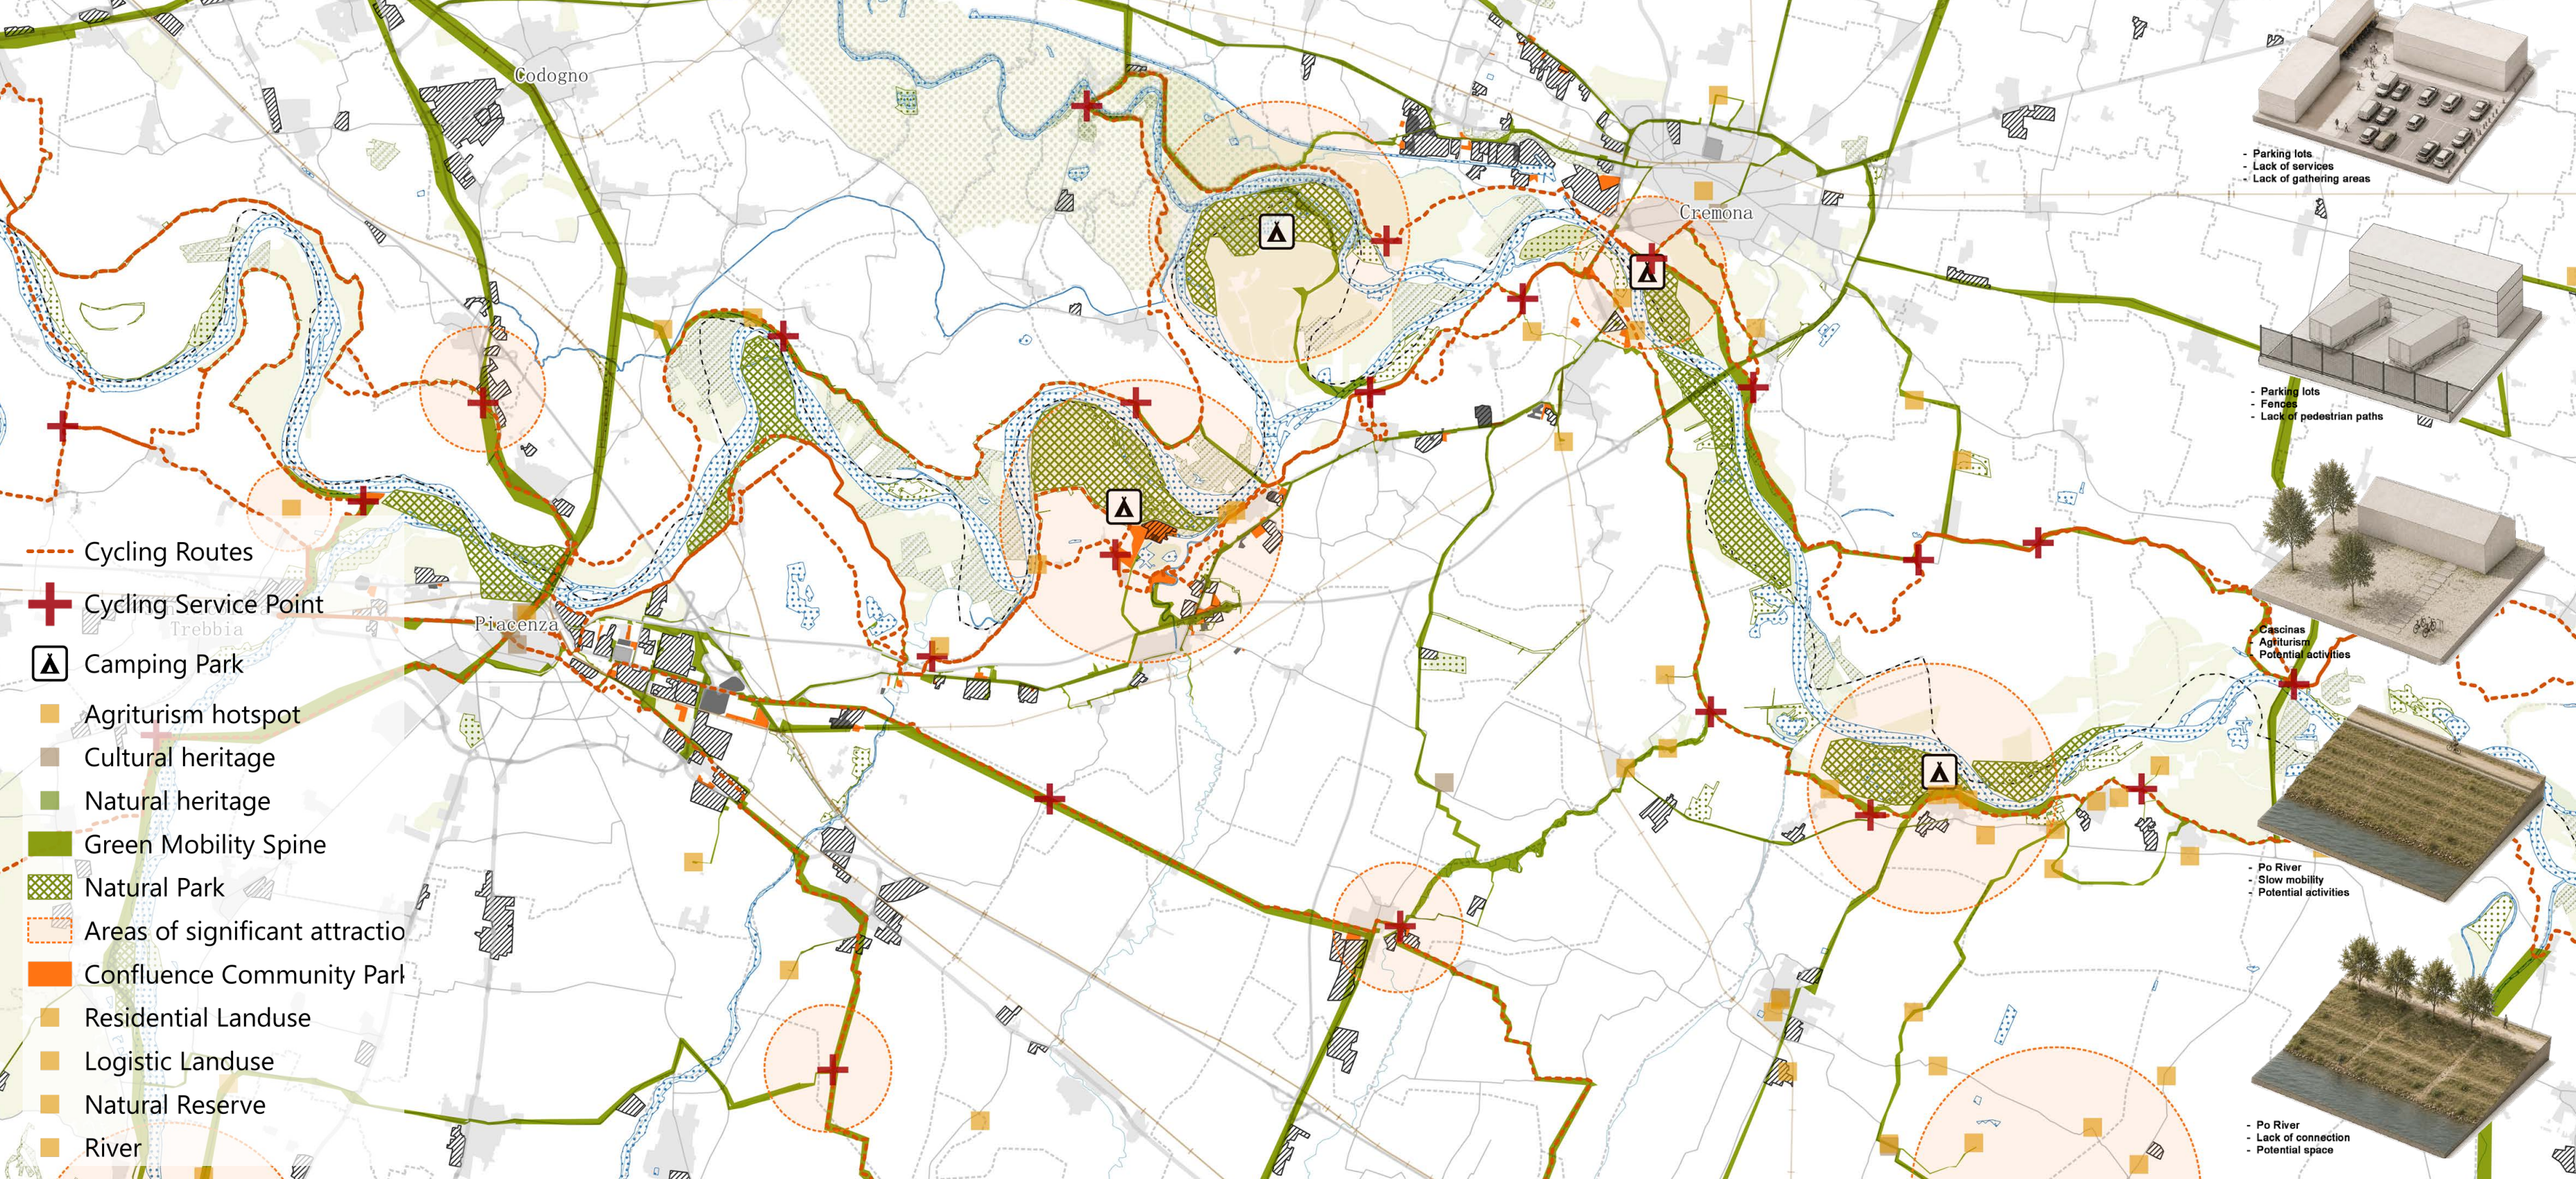

Logistic Pressure and Territorial Fragmentation

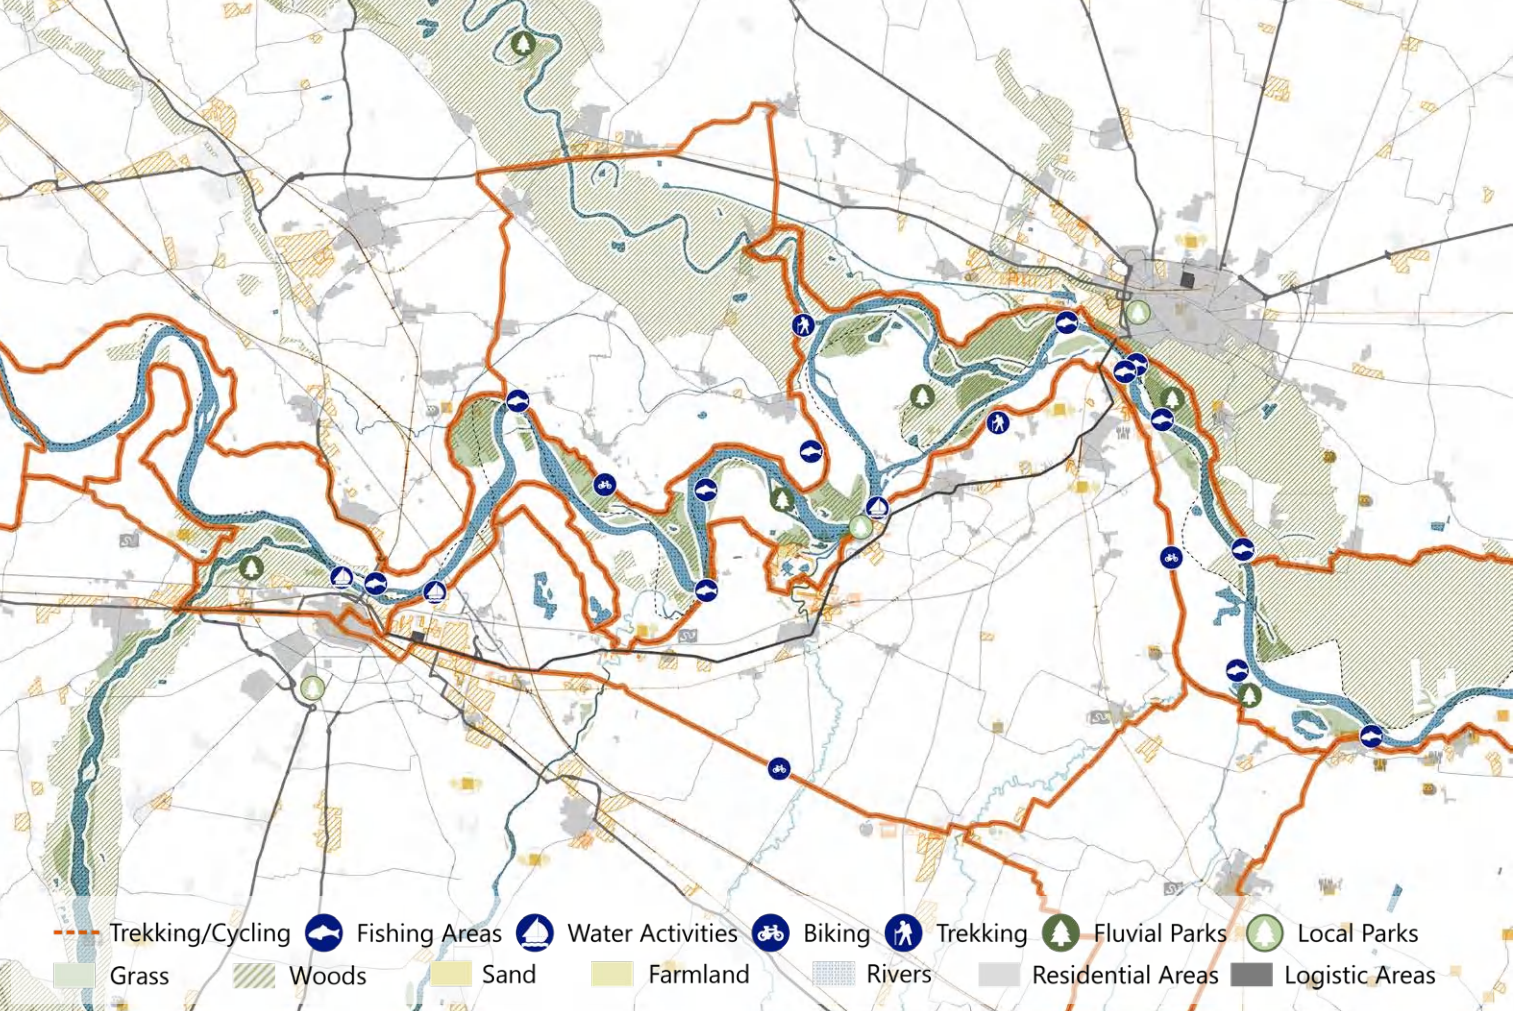

1.2 Site Context and Green-Blue Networks

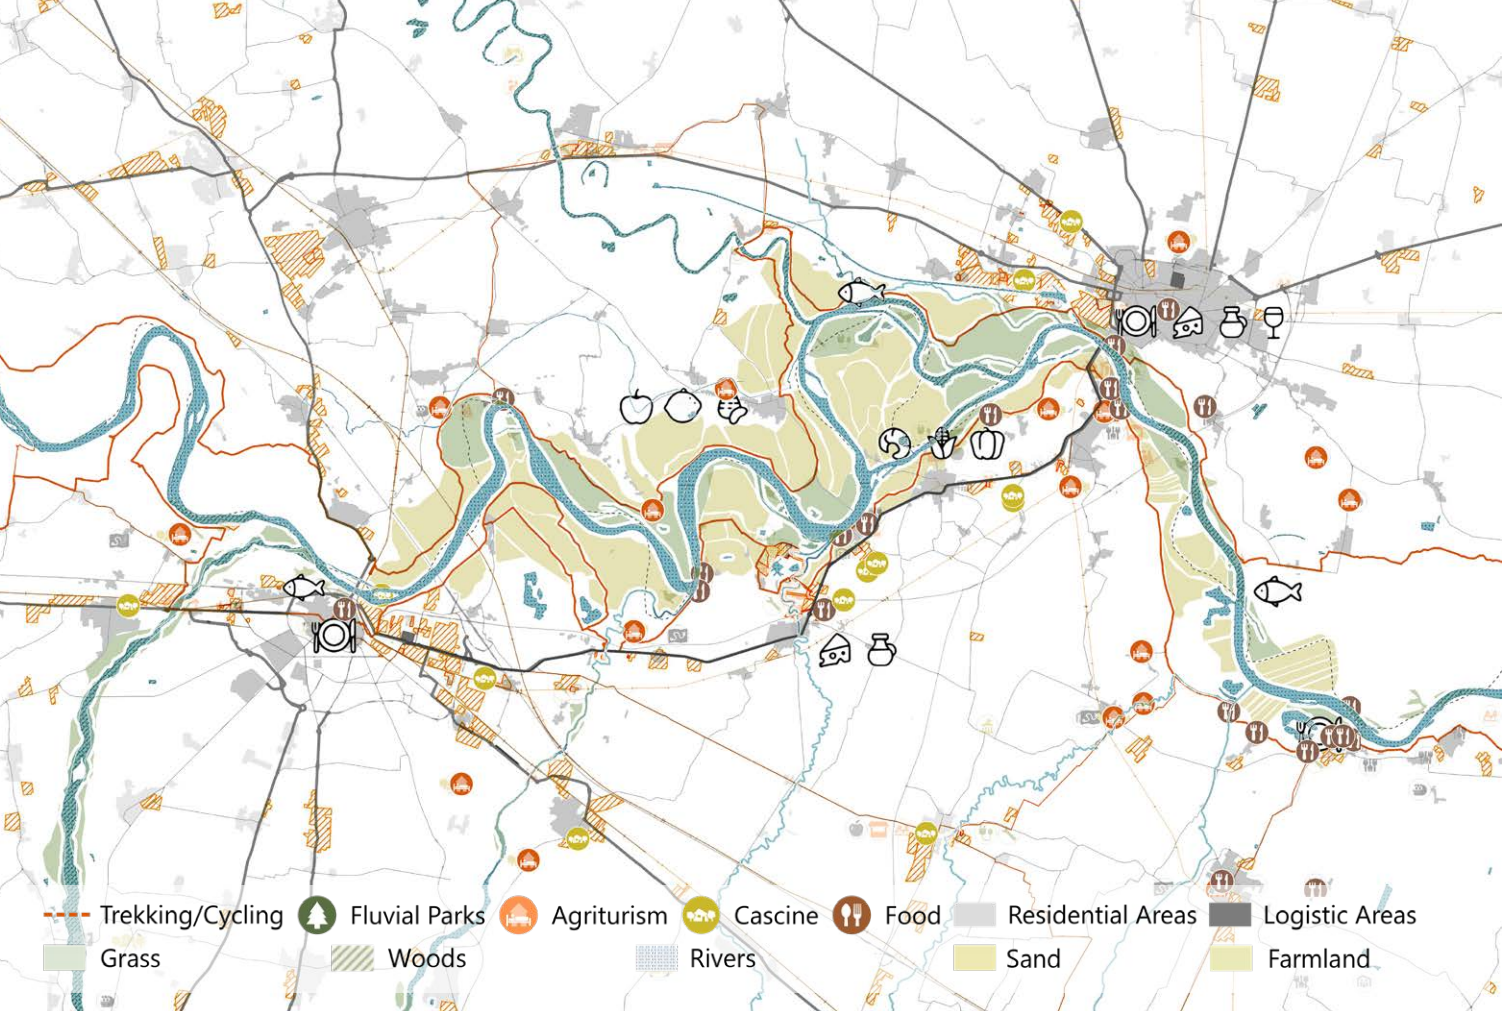

1.3 Structural strategy

1.4 Ecologies within the Territory

1.5 Agritourism Fields of Production and Rural Life

1.6 Infrastructure of Intersecting Rhythms

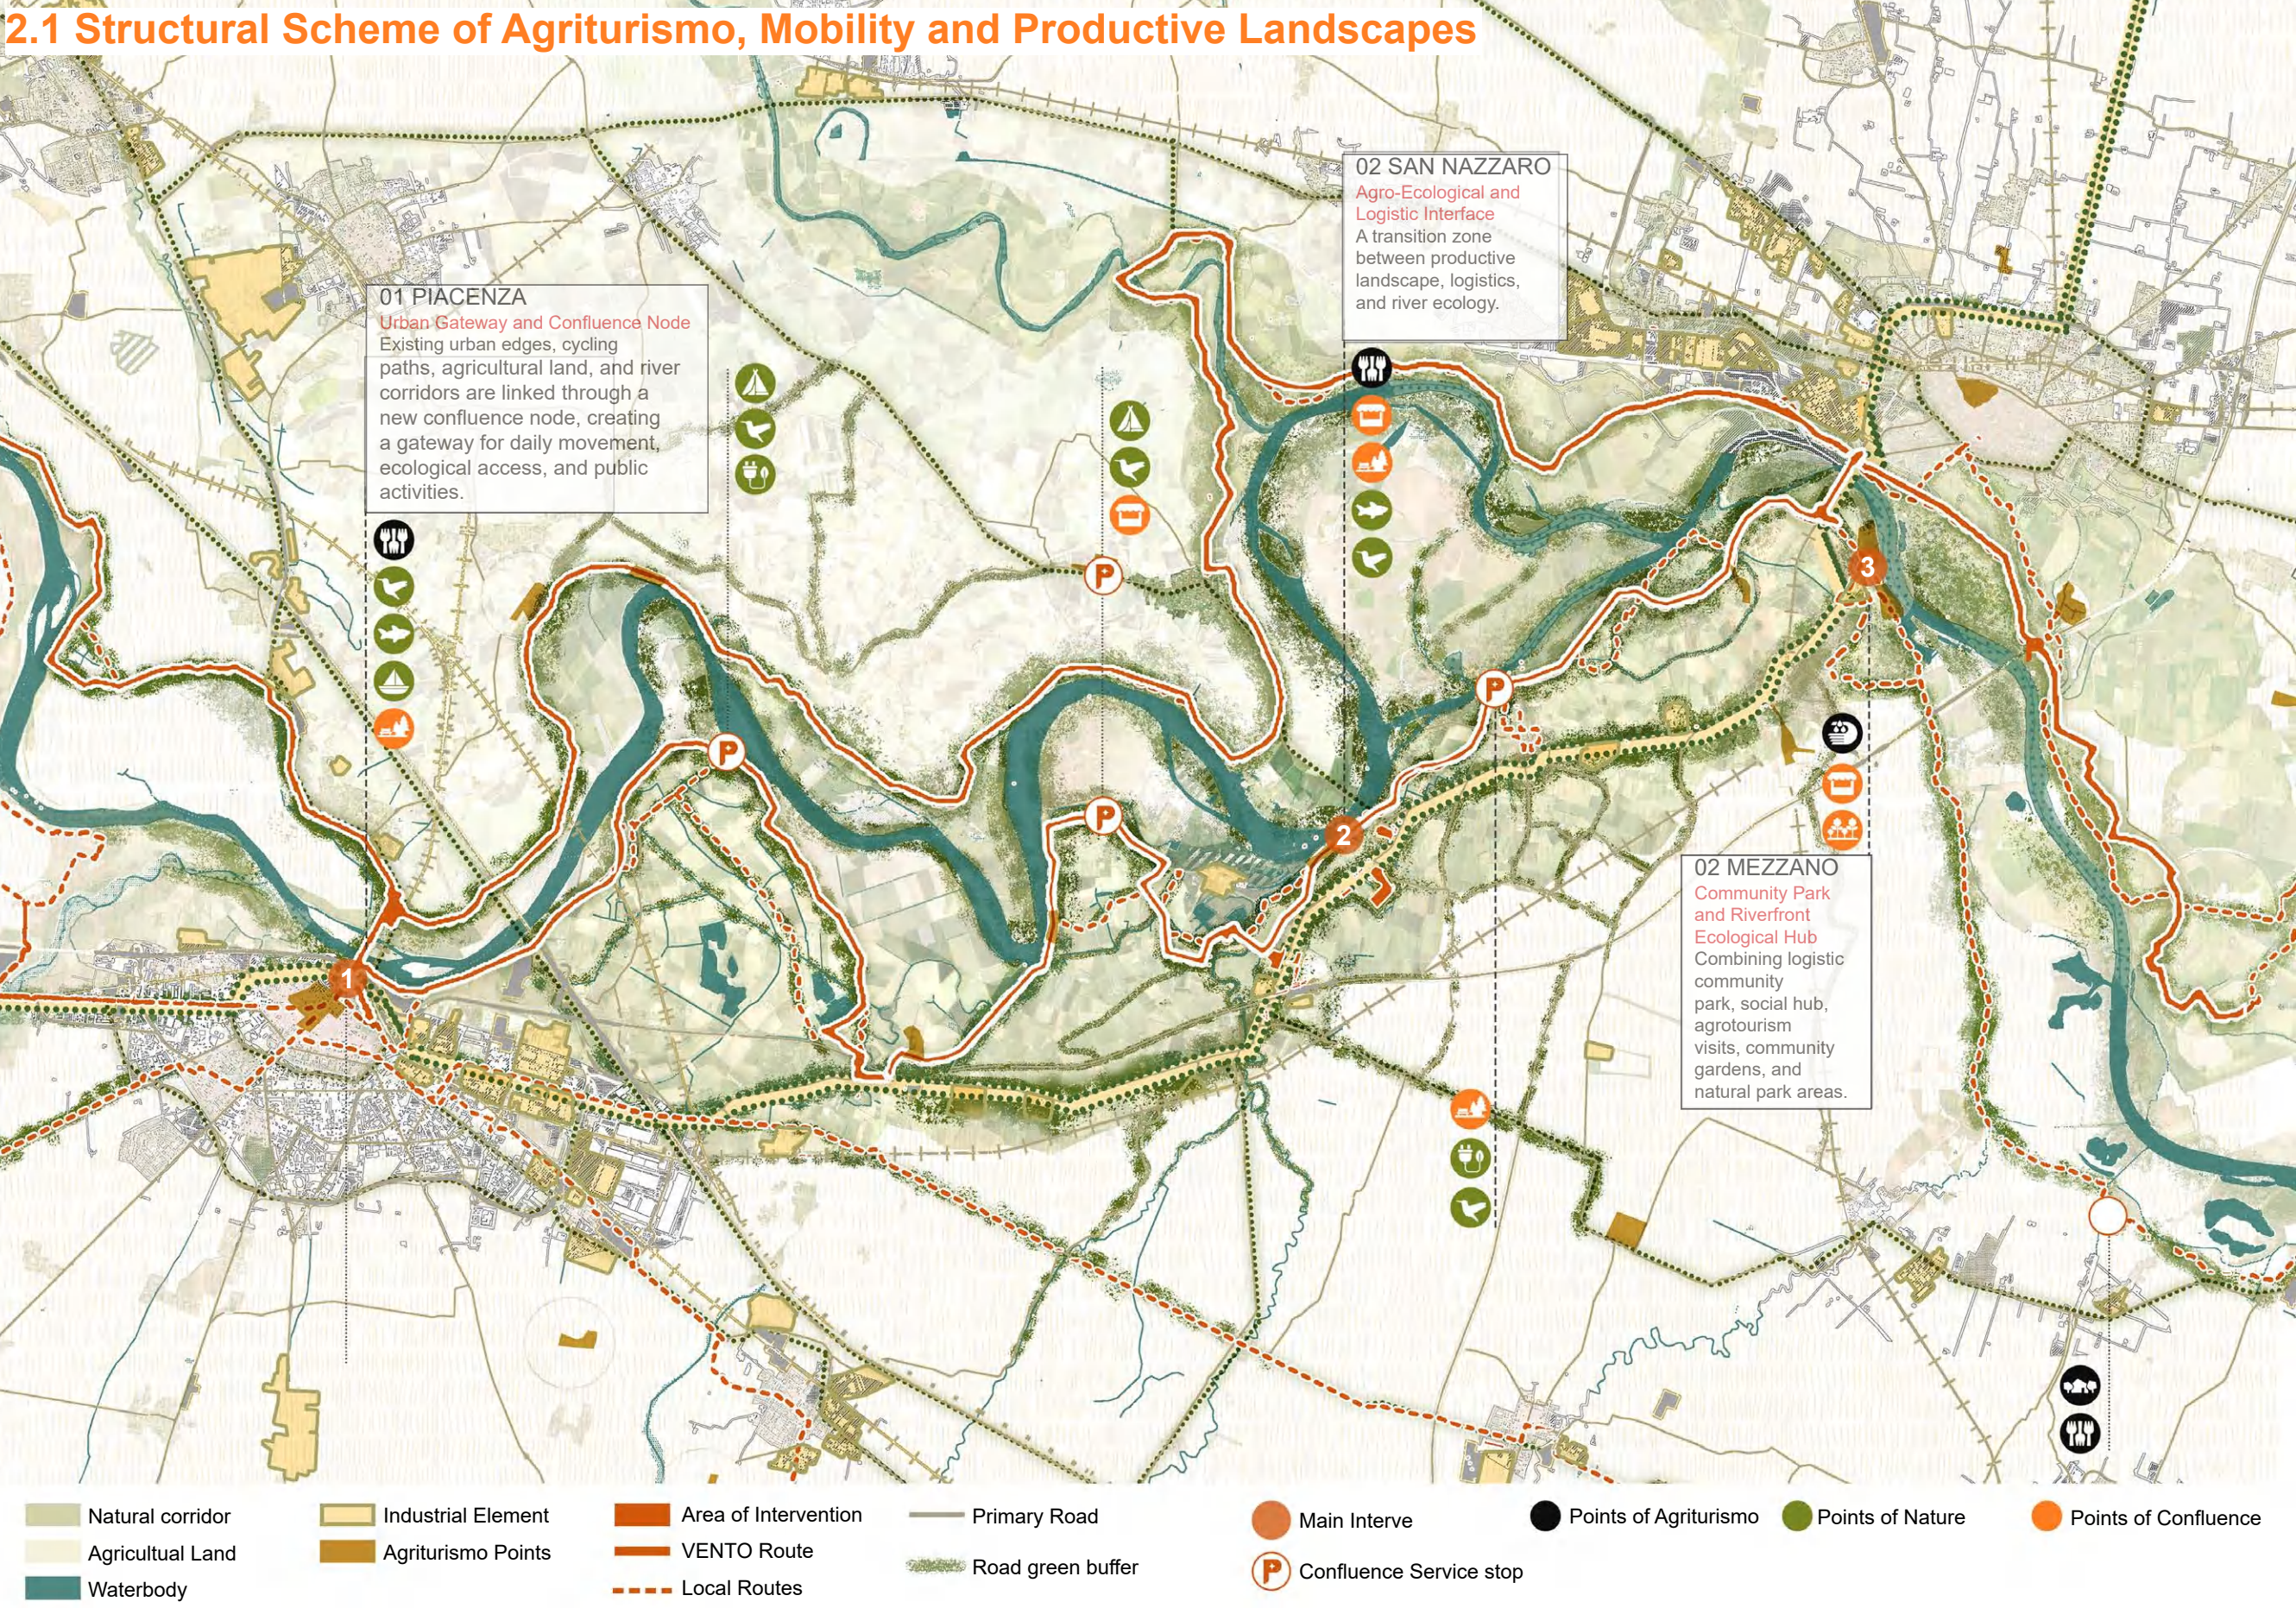

1.7 Traces of Culture and Collective Memory

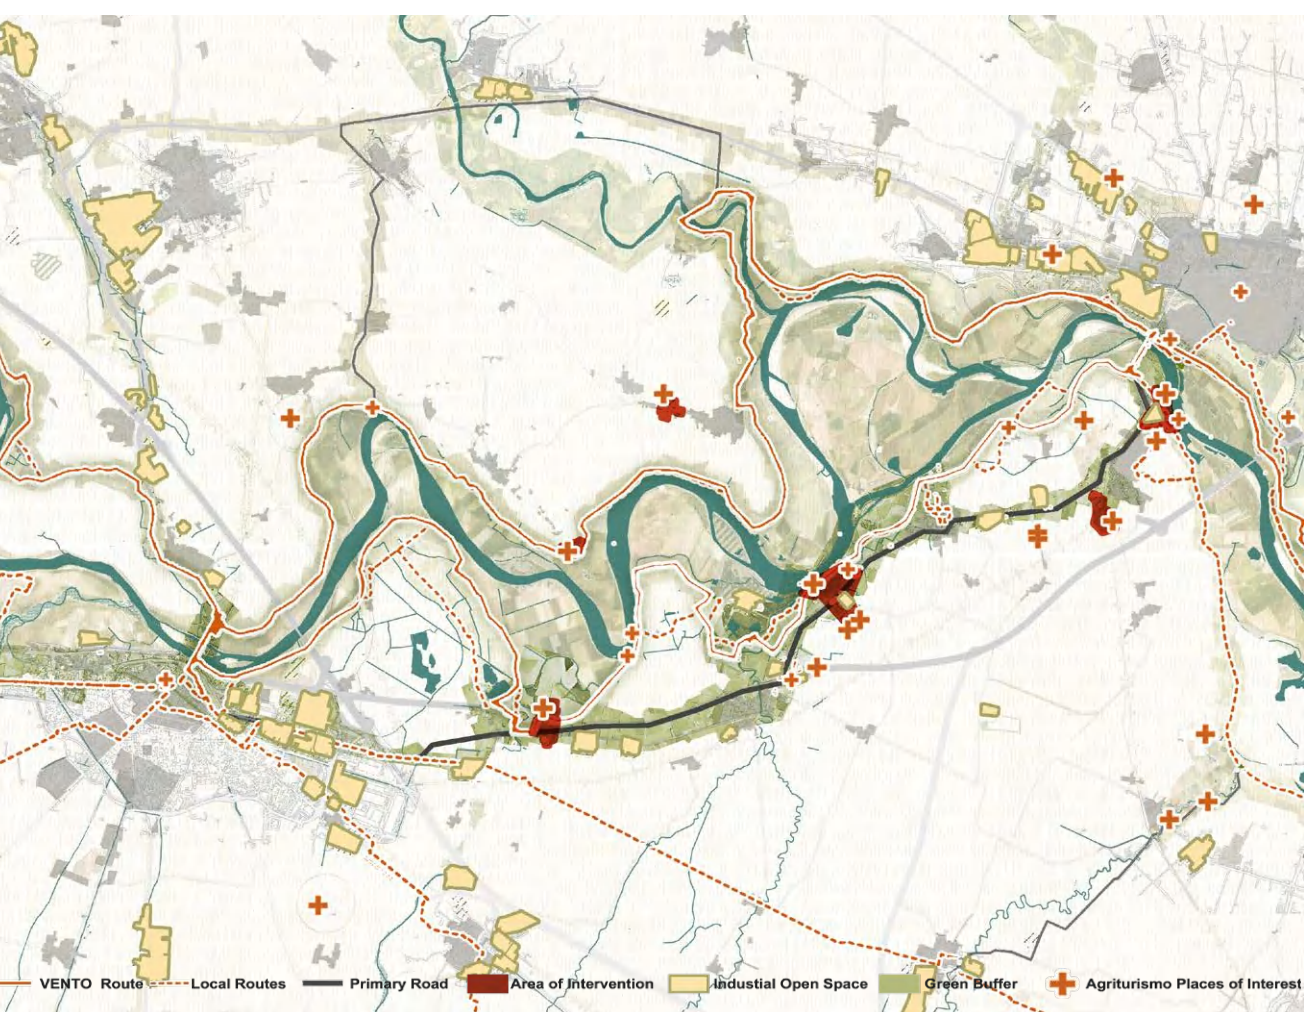

1.8 Po valley landscape collage

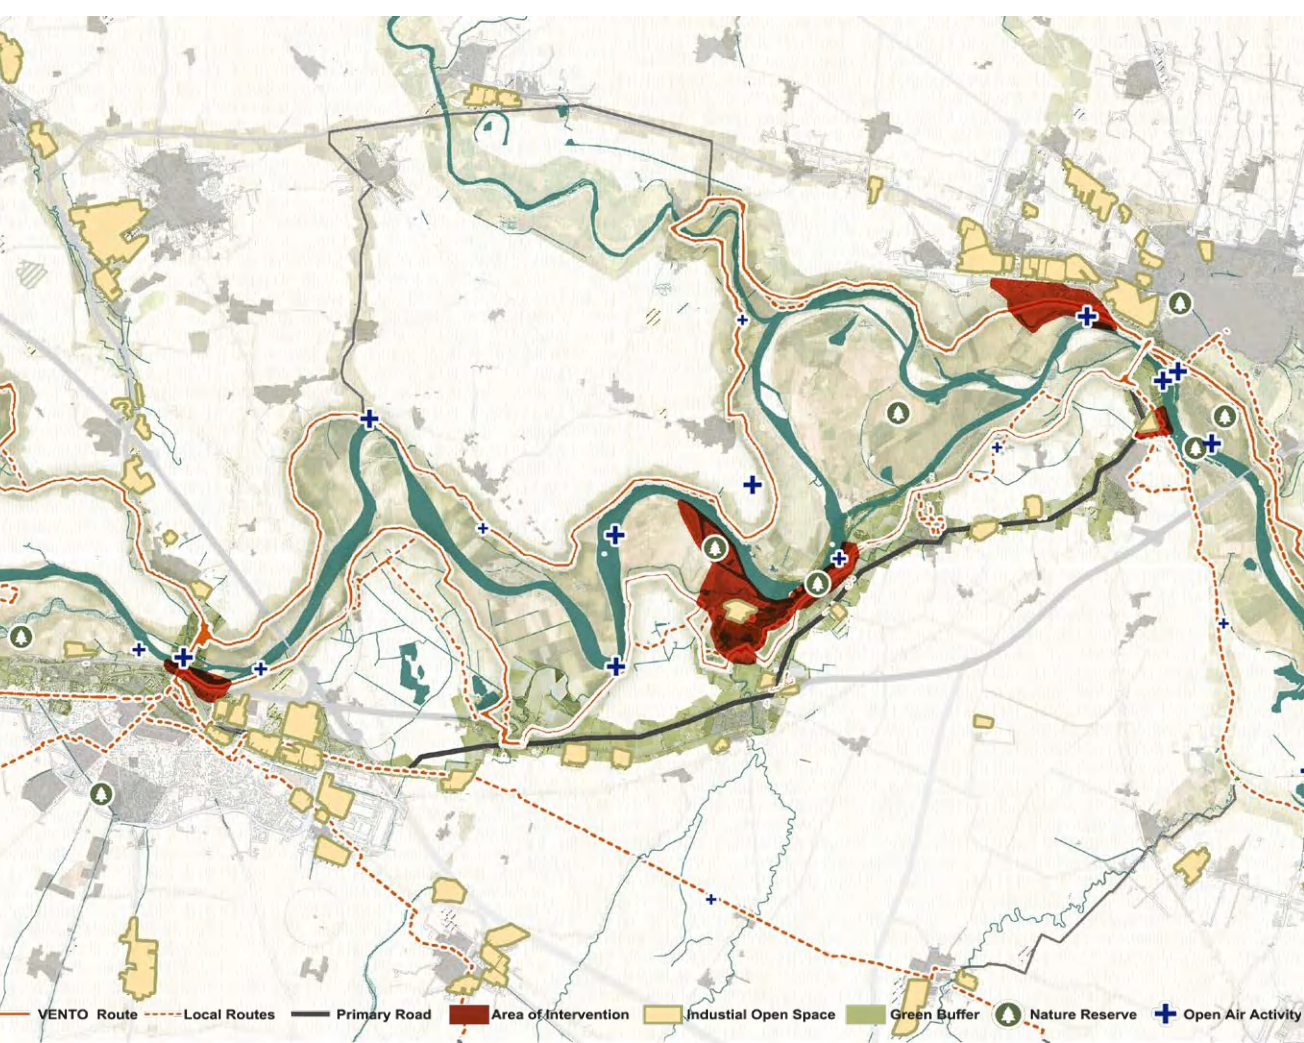

2.1 Structural Scheme of Agriturismo, Mobility and Productive Landscapes

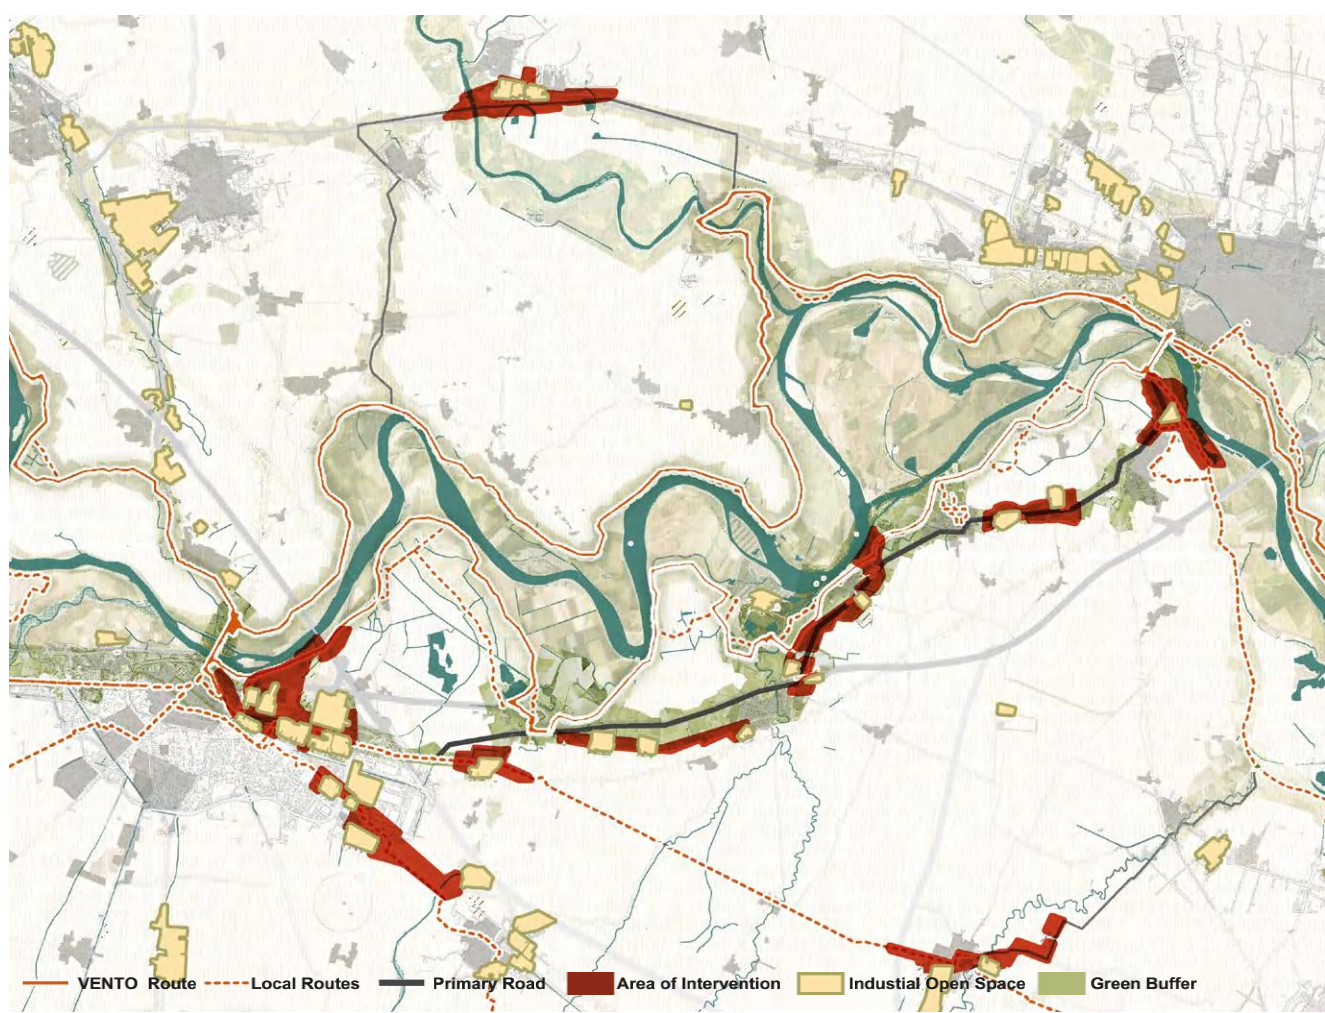

2.2 Agriturismo as a potential network connected by slow mobility routes

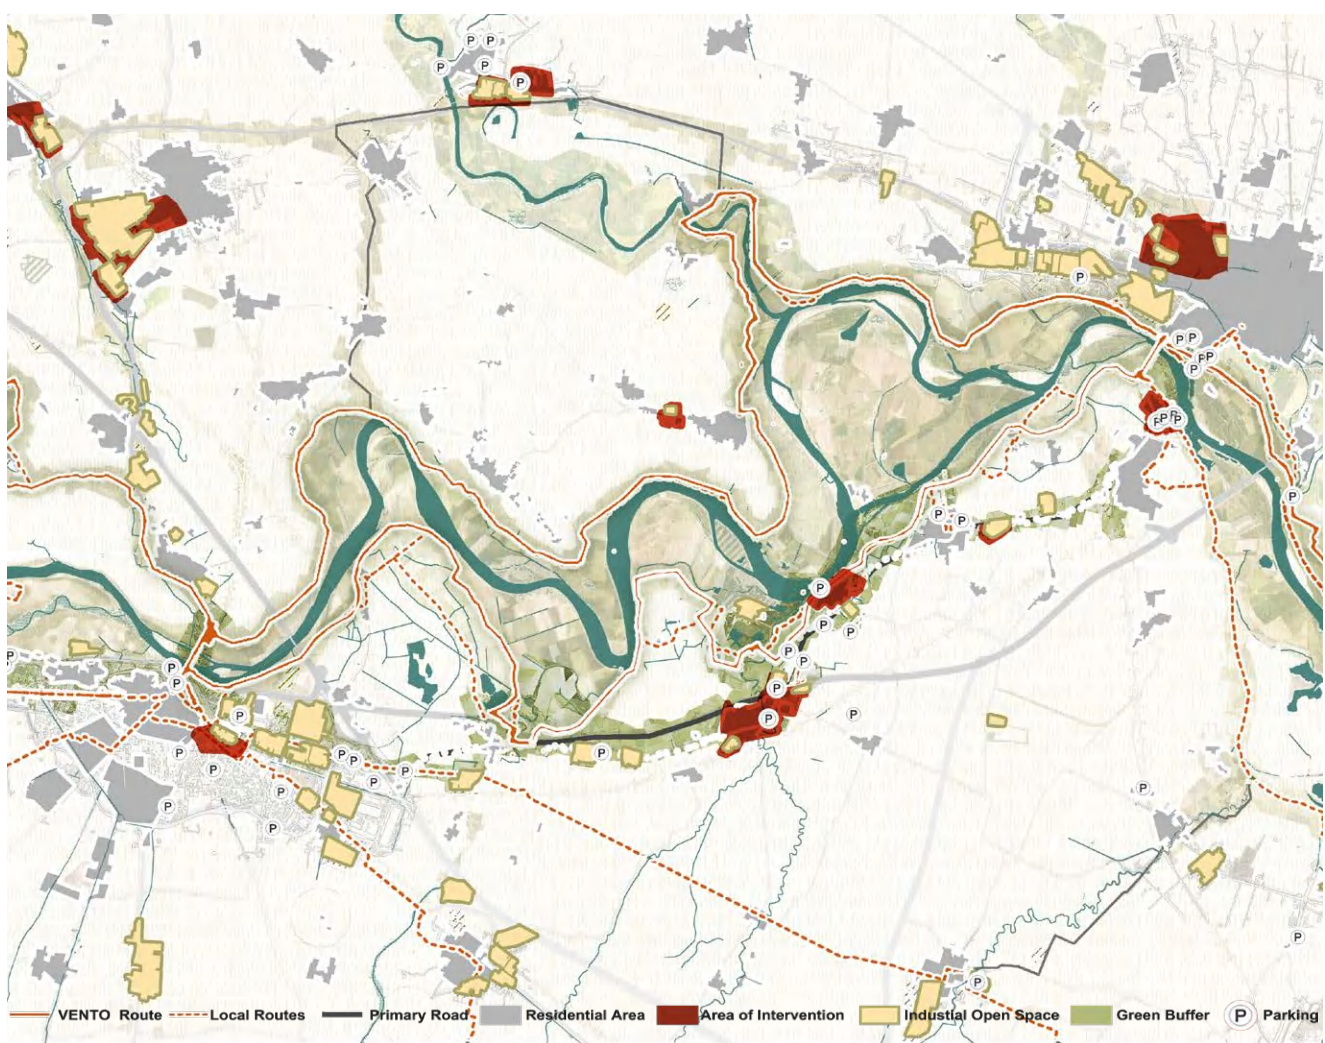

2.3 Natural areas under logistics pressure as landscapes to be protected and enhanced by slow mobility

2.2 Slow mobility as an network mediating logistics landscapes

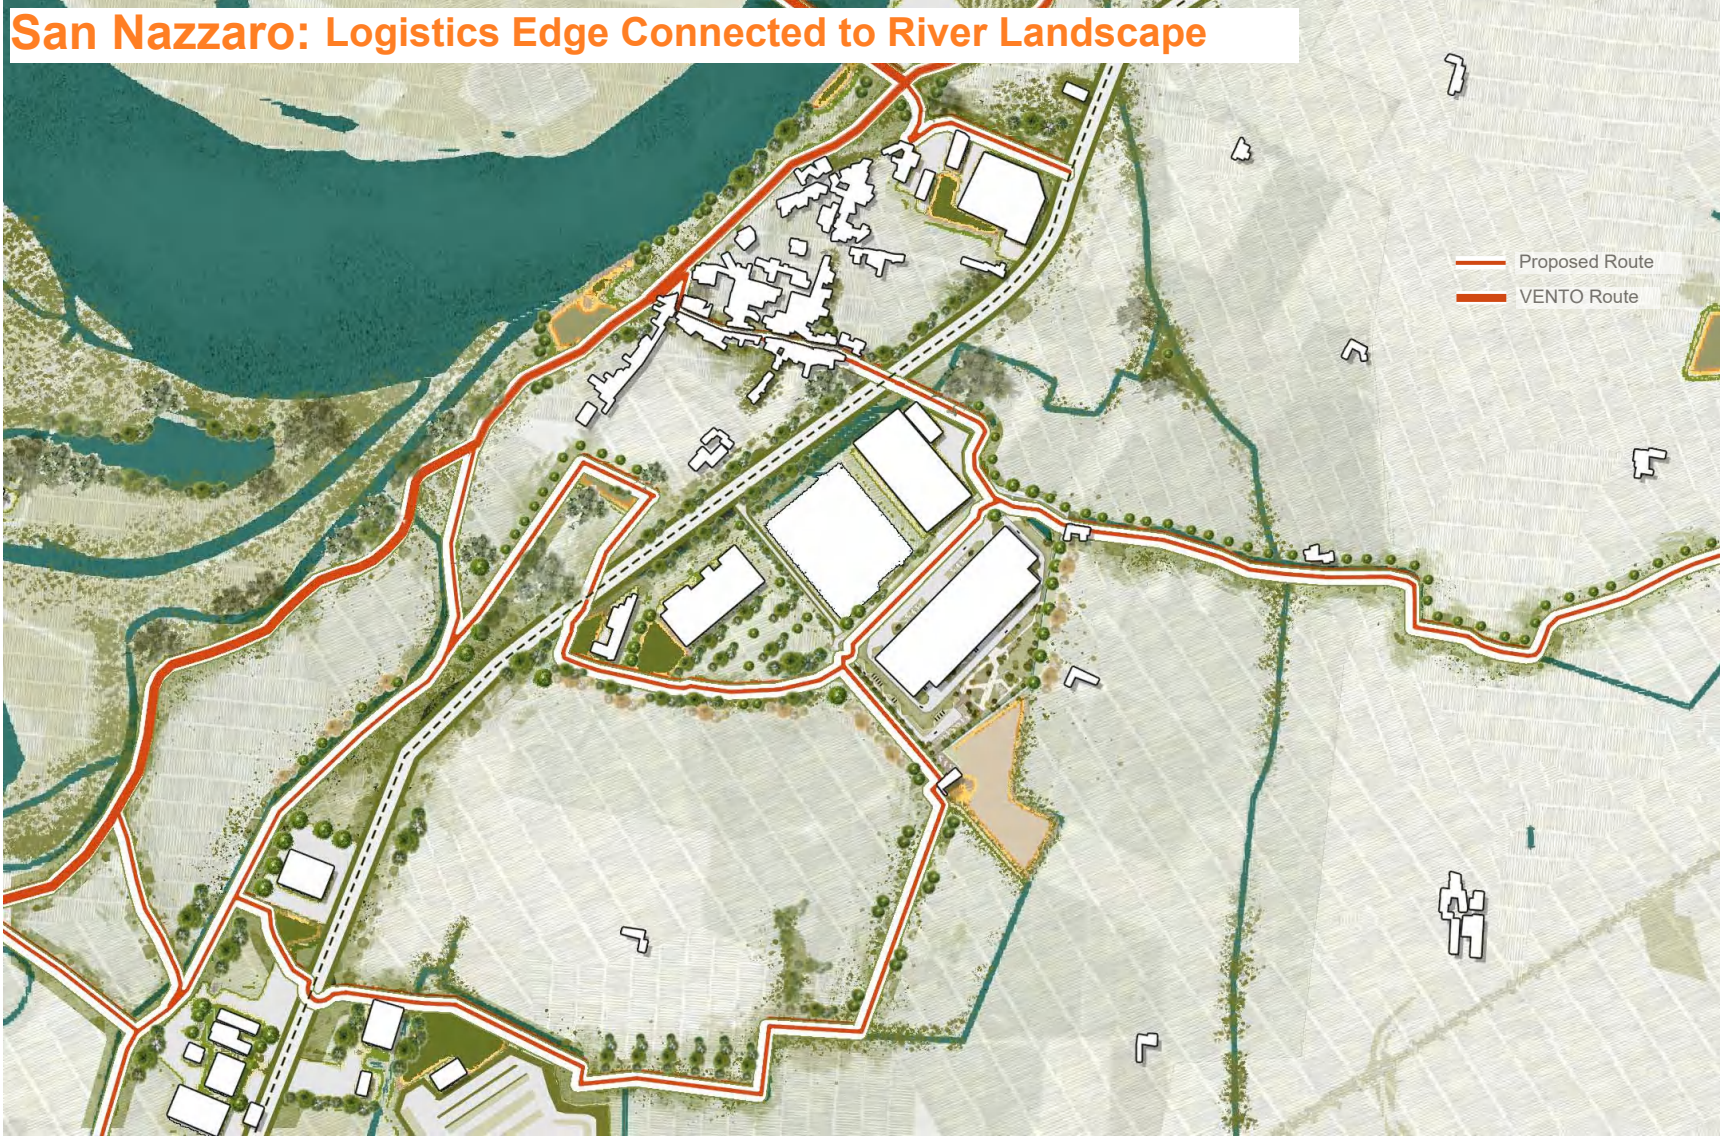

2.4 Residential and logistics edges as opportunities for shared community services, connected by slow mobility

2.5 Masterplan

San Nazzaro: Logistics Edge Connected to River Landscape

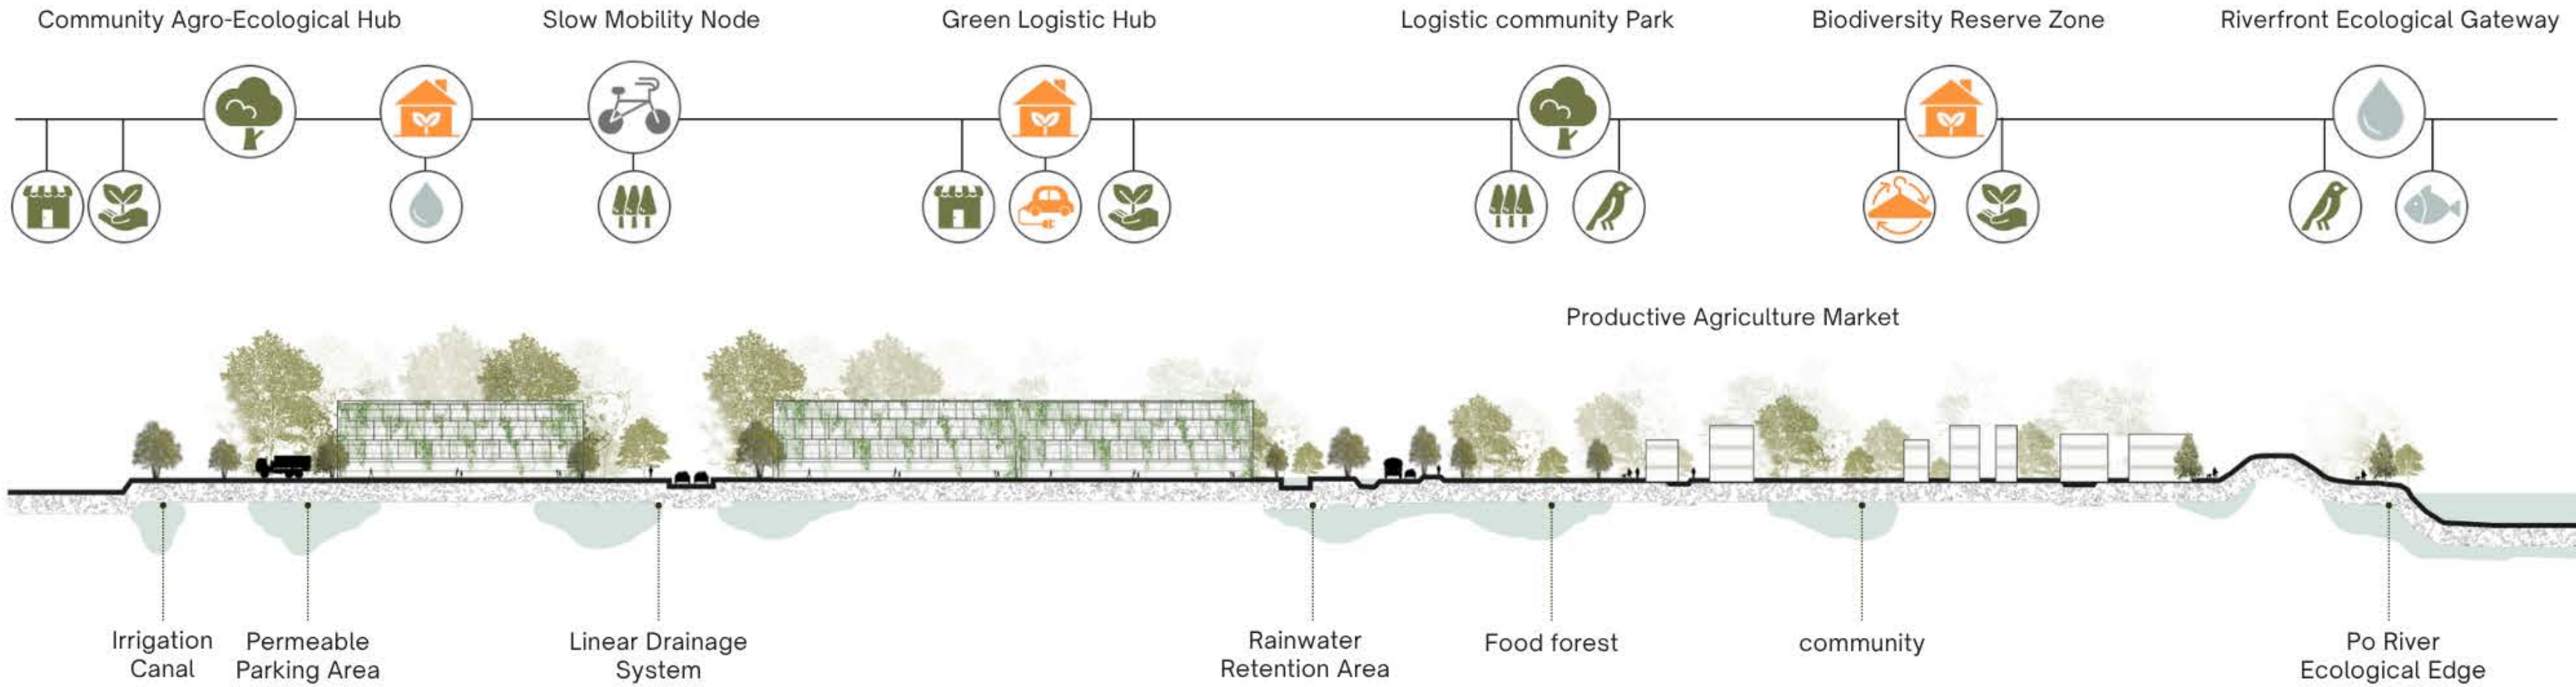

2.6 Masterplan

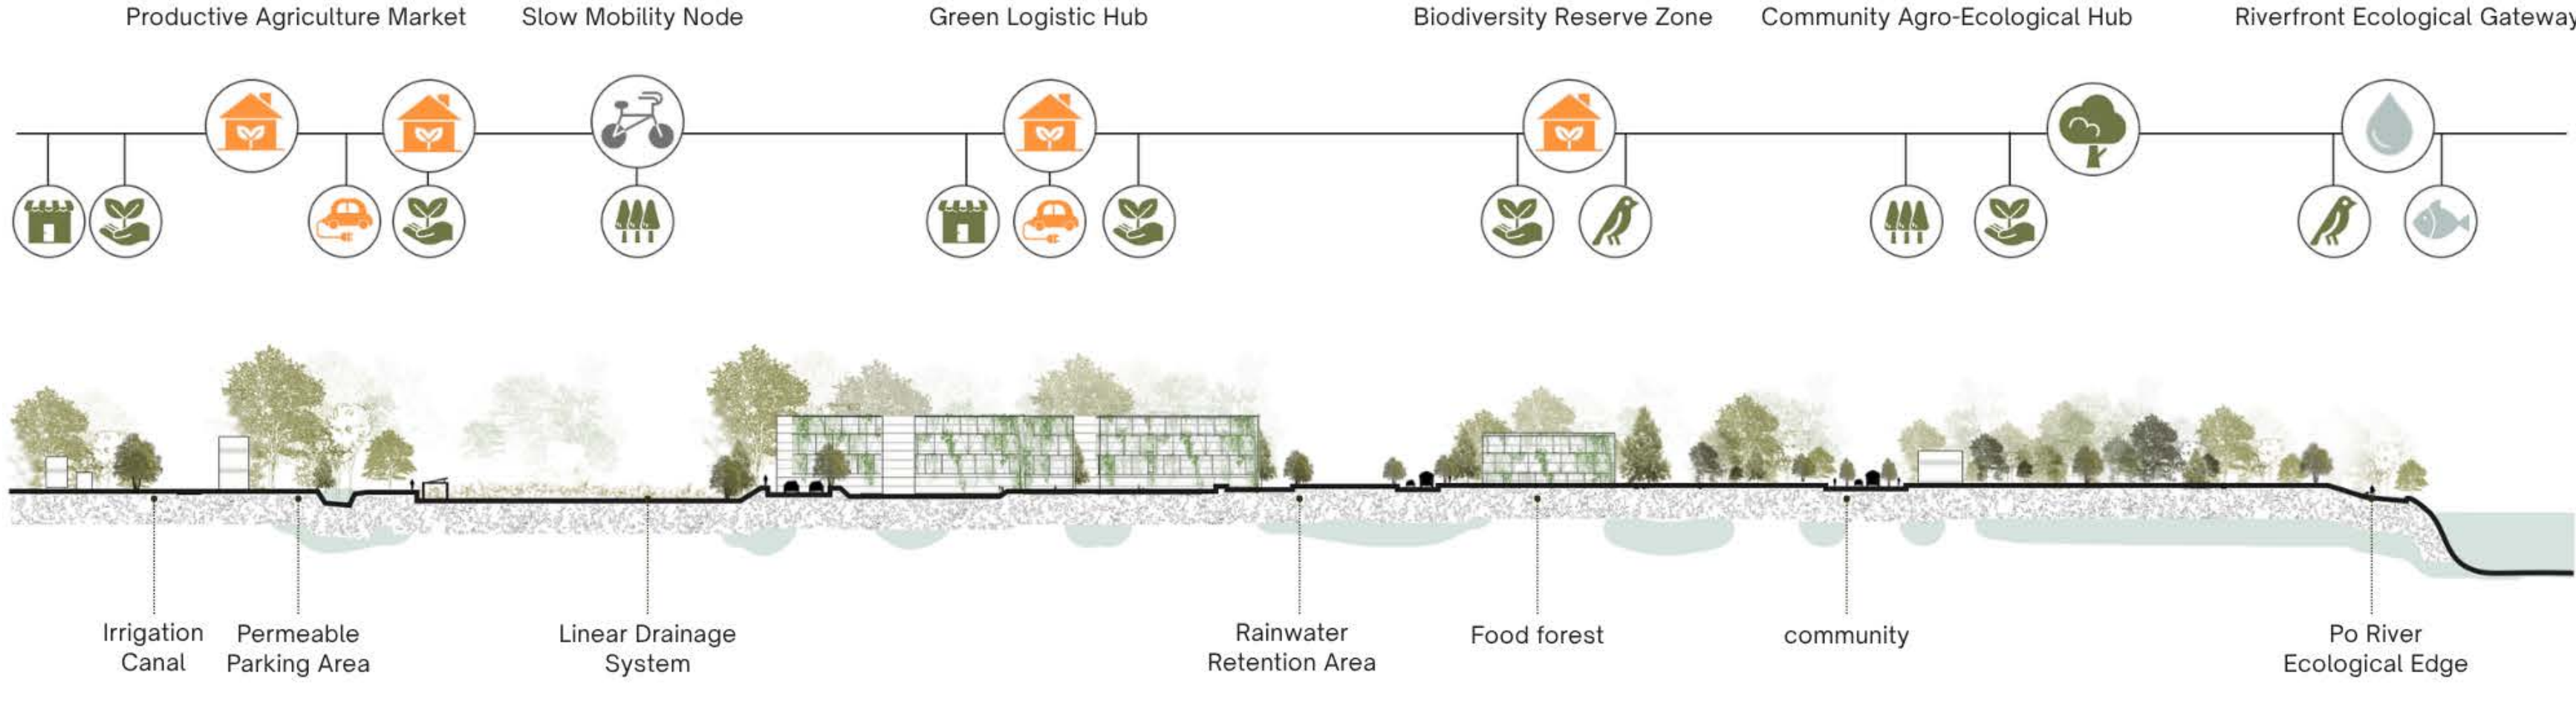

Mezzano: Community Between Village and Productive Land

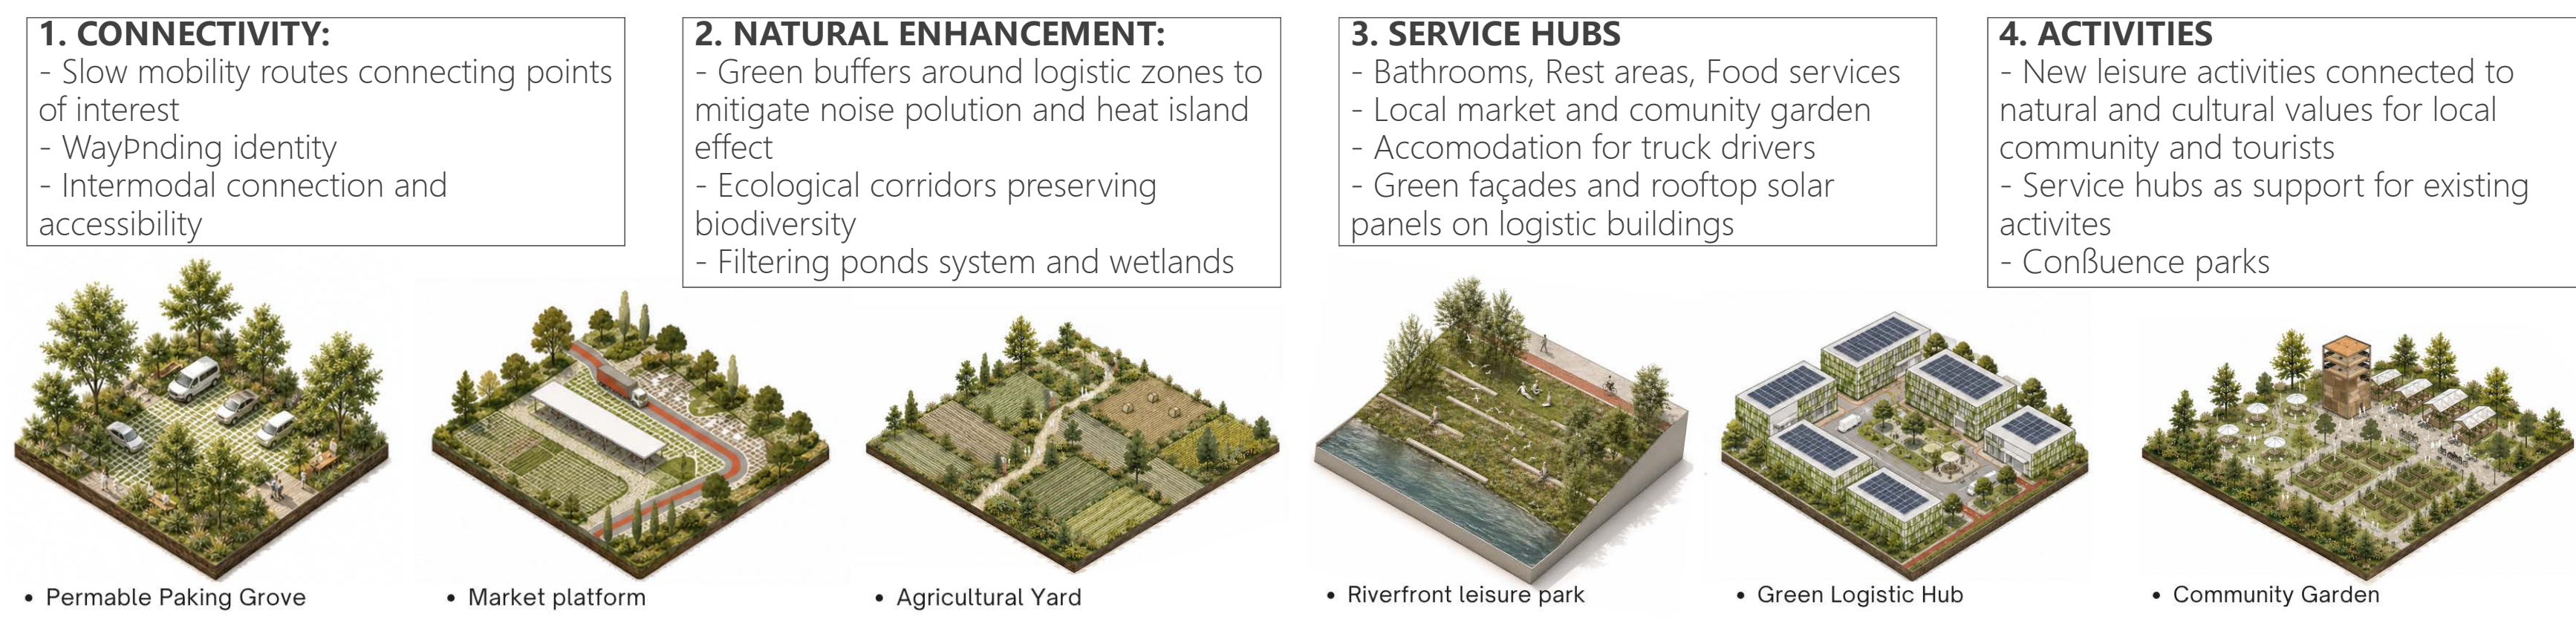

2.7 Ecological connectivity - SAN NAZZARO

2.8 Ecological connectivity - MEZZANO

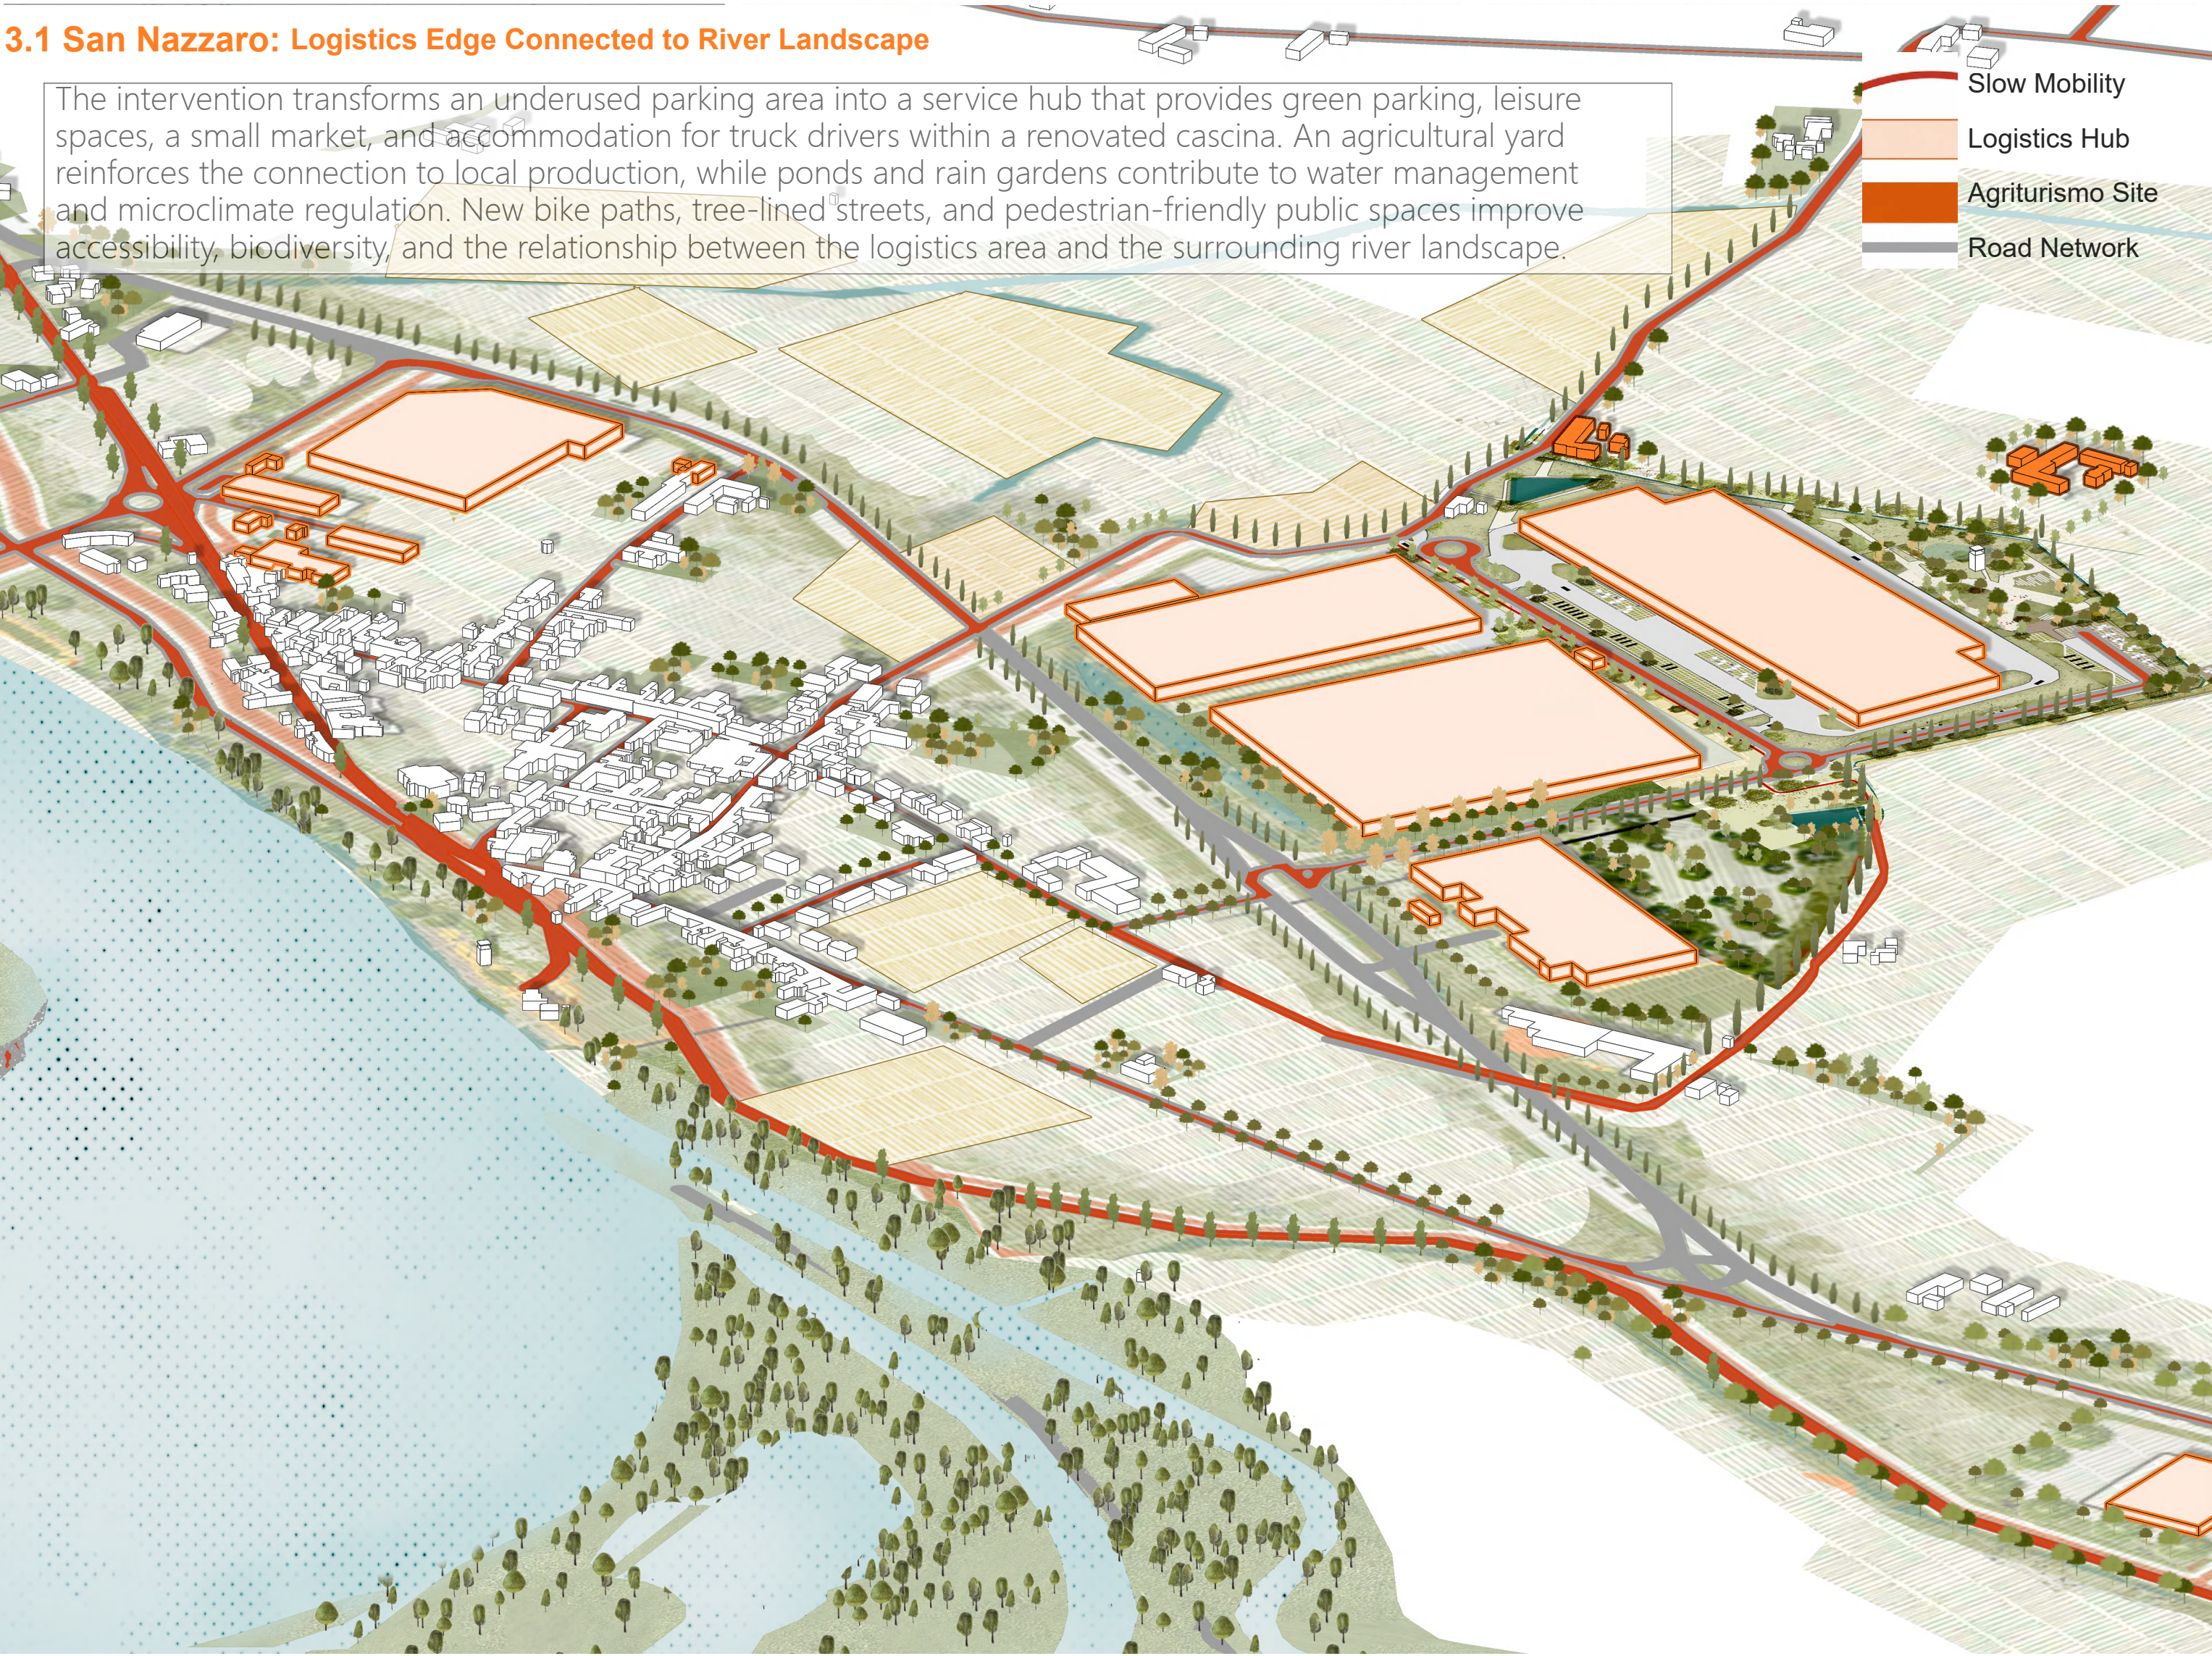

2.9 Guideline intervention

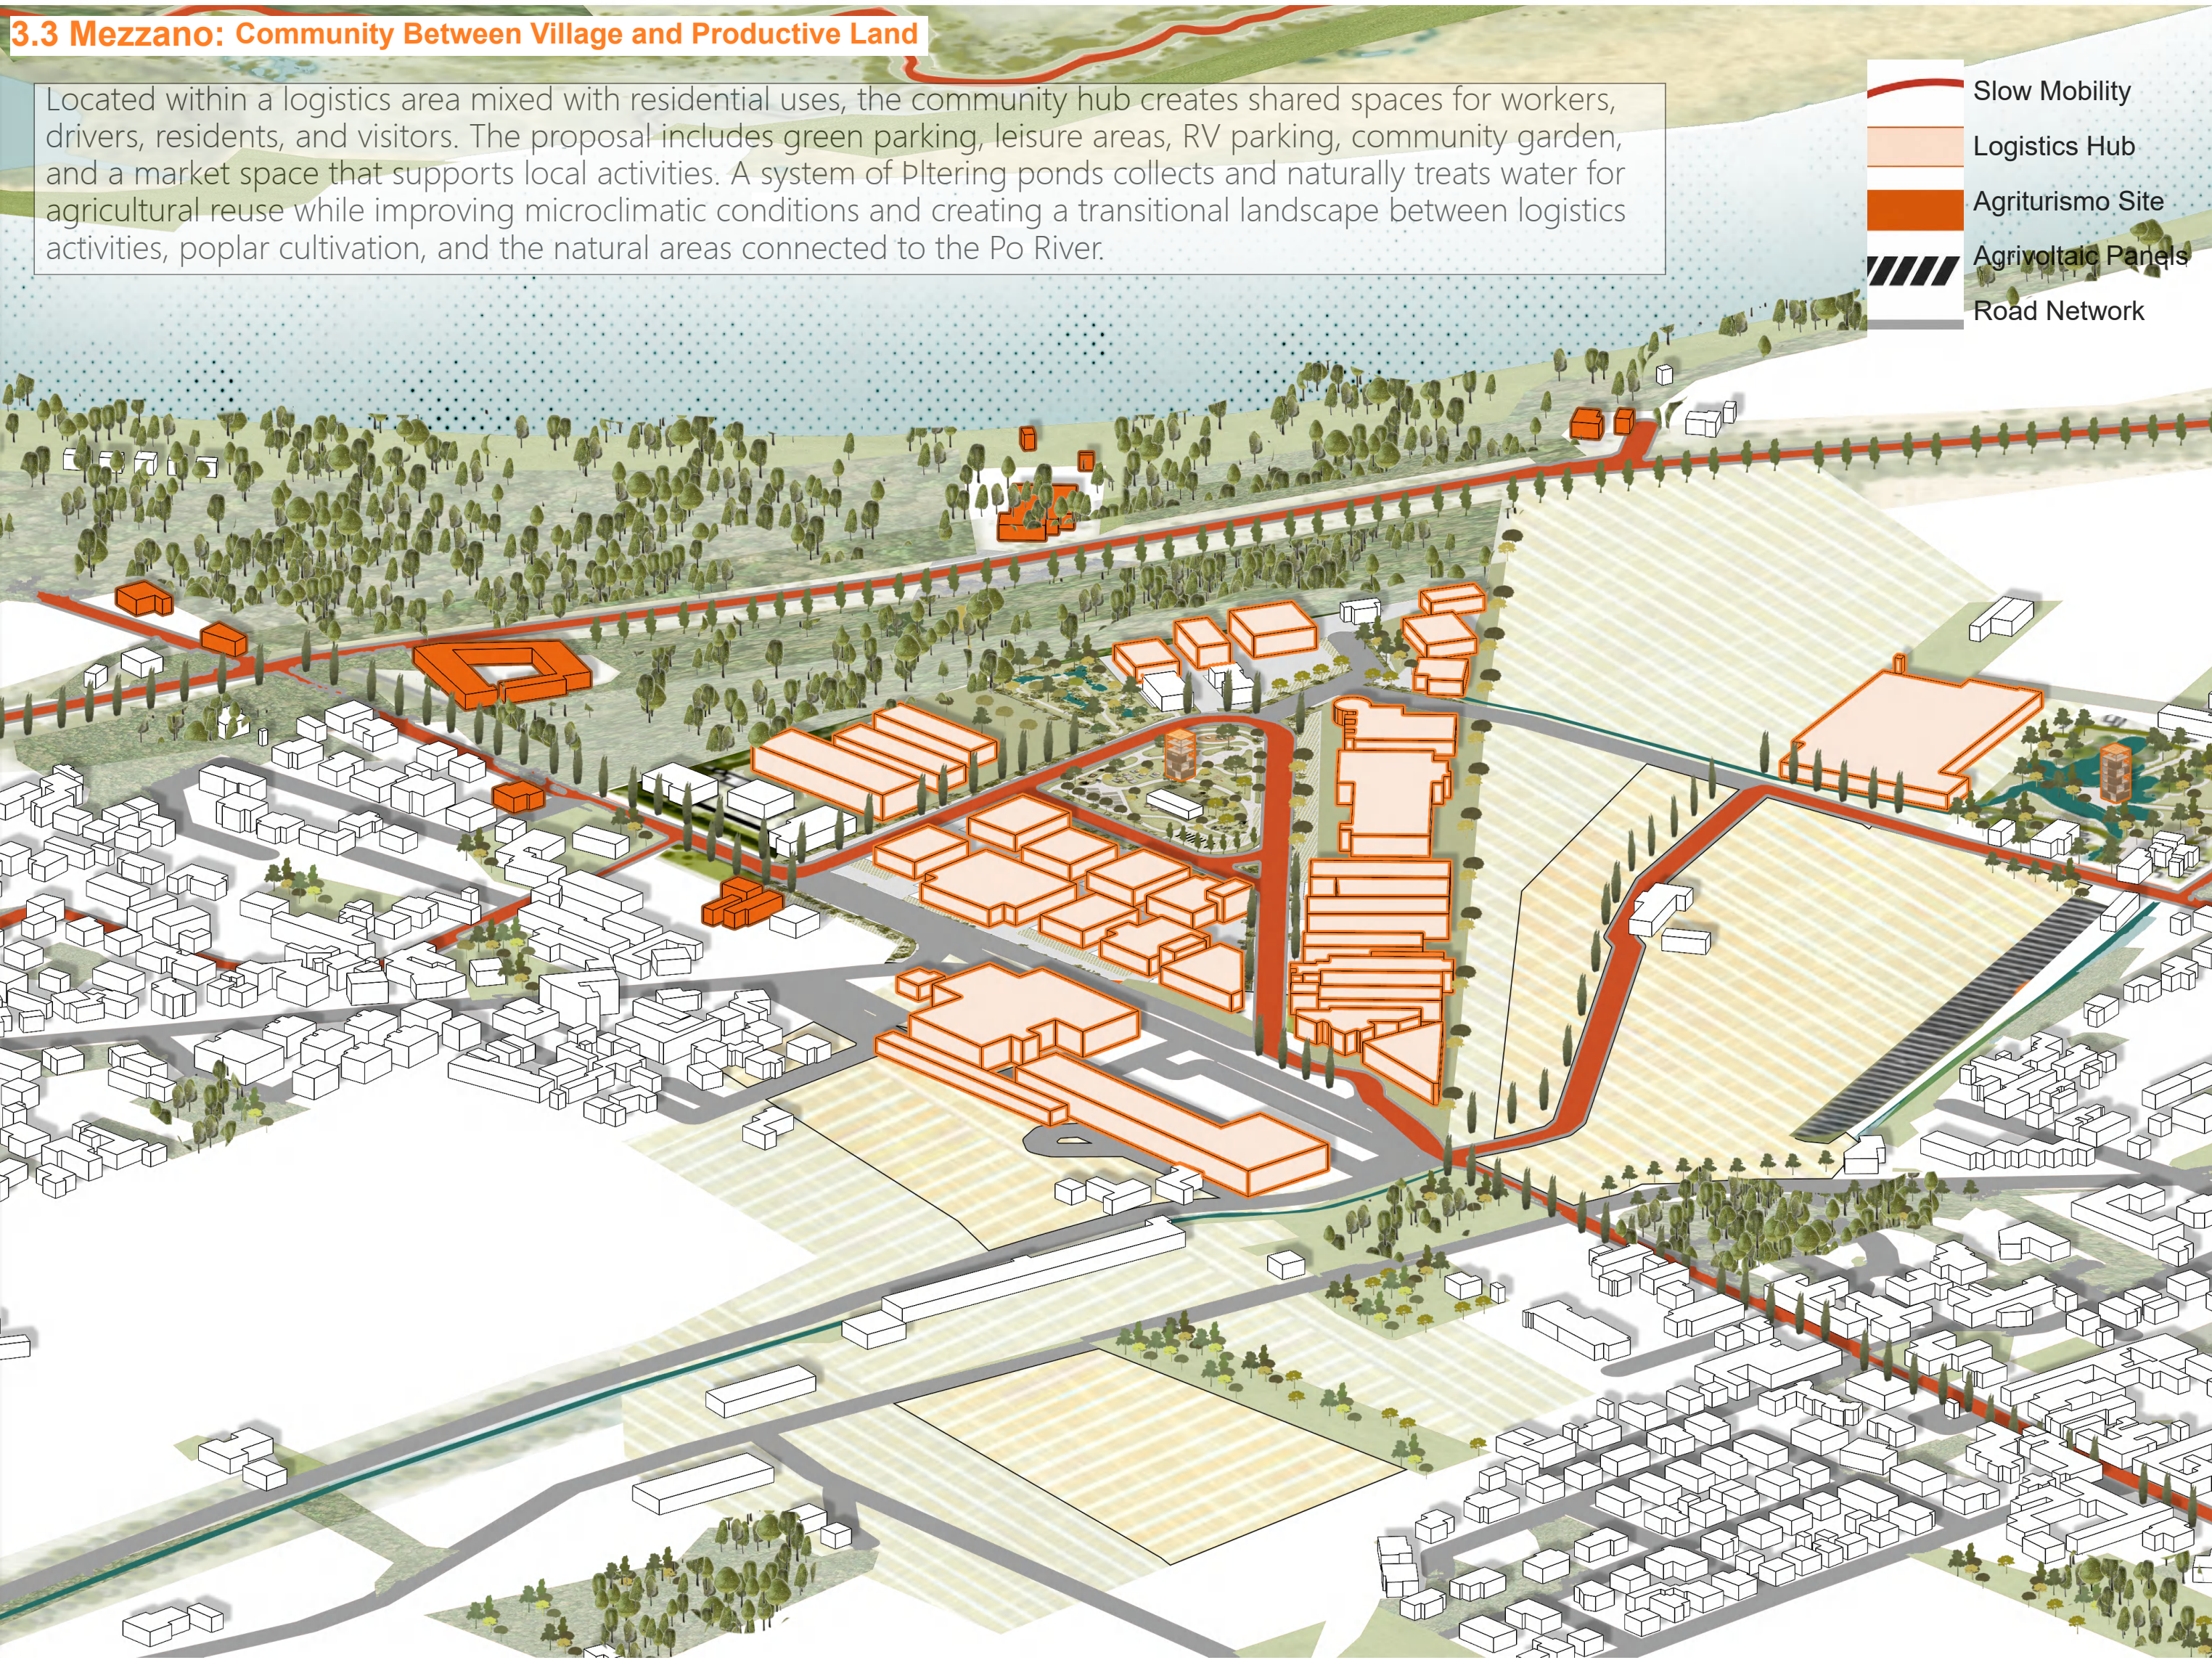

3.1 San Nazzaro: Logistics Edge Connected to River Landscape

The intervention transforms an underused parking area into a service hub that provides green parking, leisure spaces, a small market, and accommodation for truck drivers within a renovated cascina. An agricultural yard reinforces the connection to local production, while ponds and rain gardens contribute to water management and microclimate regulation. New bike paths, tree-lined streets, and pedestrian-friendly public spaces improve accessibility, biodiversity, and the relationship between the logistics area and the surrounding river landscape.

3.3 Mezzano: Community Between Village and Productive Land

Located within a logistics area mixed with residential uses, the community hub creates shared spaces for workers, drivers, residents, and visitors. The proposal includes green parking, leisure areas, RV parking, community garden, and a market space that supports local activities. A system of filtering ponds collects and naturally treats water for agricultural reuse while improving microclimatic conditions and creating a transitional landscape between logistics activities, poplar cultivation, and the natural areas connected to the Po River.

3.2 San Nazzaro: Riverside Leisure Area

A recreational landscape that enhances access to the Po River, ecological restoration, food service and panoramic views, encouraging outdoor activities and tourism.

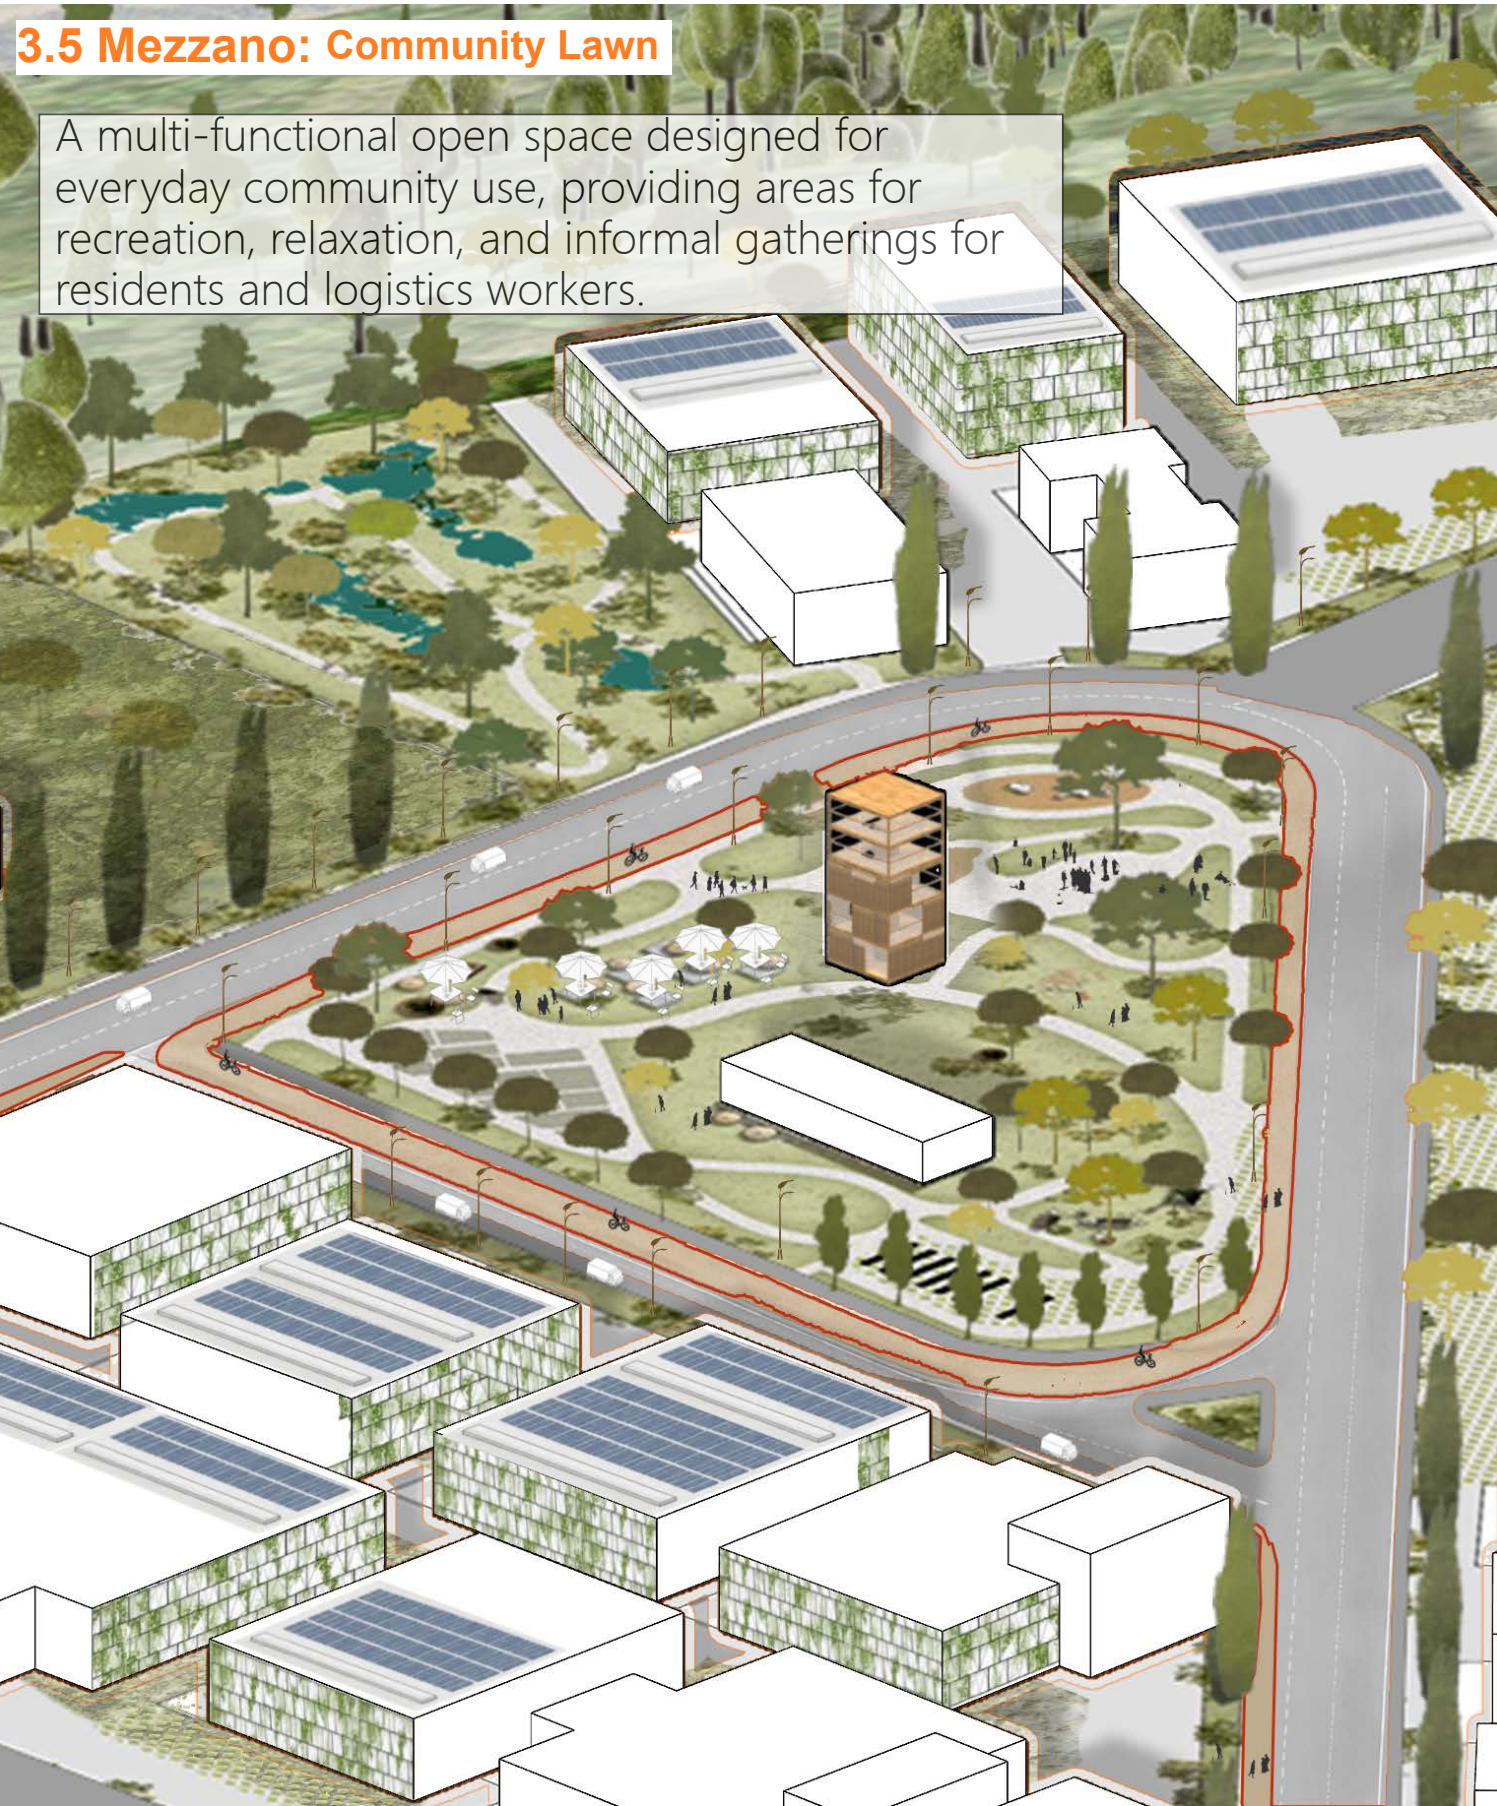

3.3 San Nazzaro: Multifunctional Platform

A multifunctional space combining a local market, food services, public amenities, and rest areas for truck drivers and logistics workers. The intervention supports local producers while creating opportunities for social interaction between workers, residents, and visitors.

3.5 Mezzano: Community Lawn

A multi-functional open space designed for everyday community use, providing areas for recreation, relaxation, and informal gatherings for residents and logistics workers.

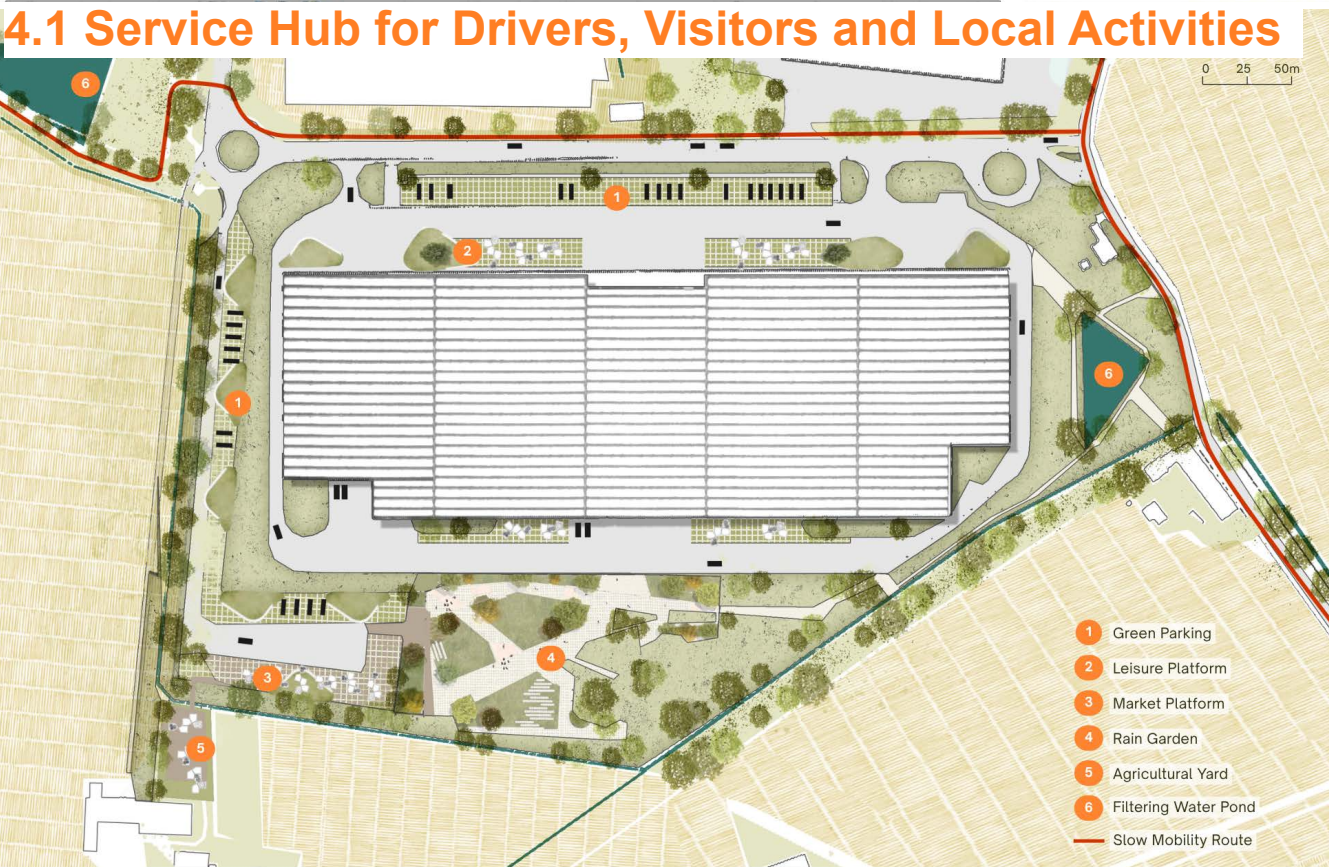

3.5 Mezzano: Rain Gardens

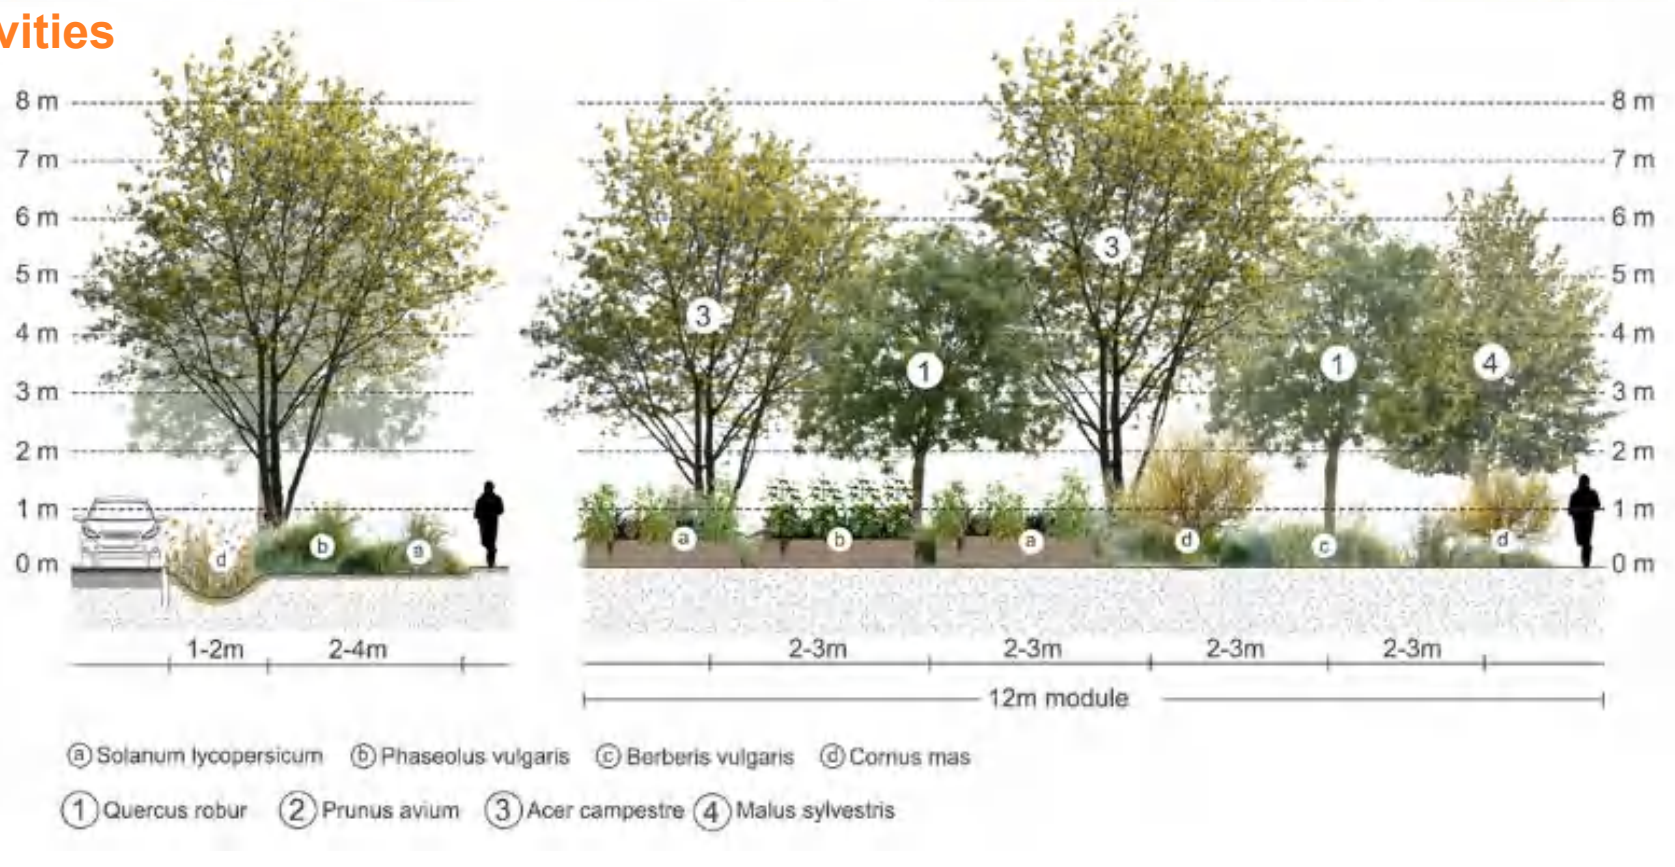

A water-sensitive landscape integrating rain gardens and filtering ponds that improve biodiversity, regulate the microclimate, and support sustainable water management within the site.

4.1 Service Hub for Drivers, Visitors and Local Activities

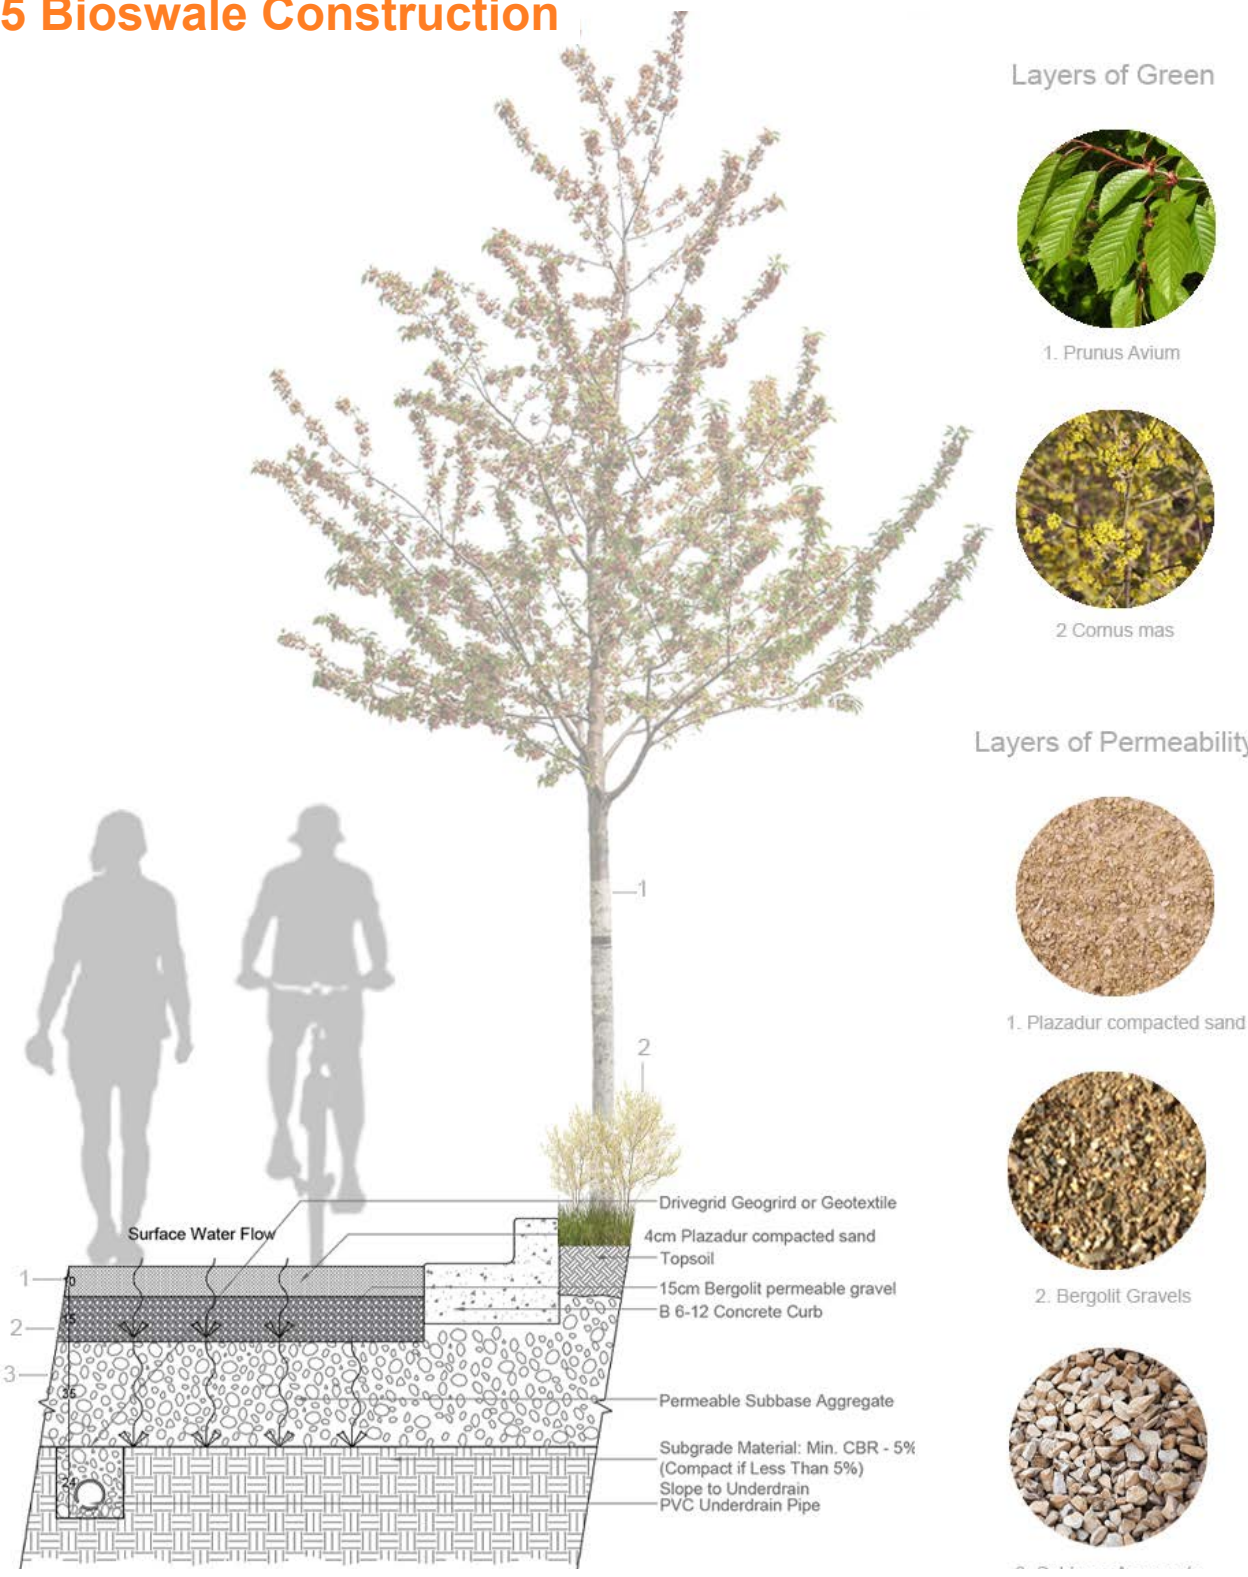

4.2 Community Lawn for Market, Leisure and Seasonal Activities

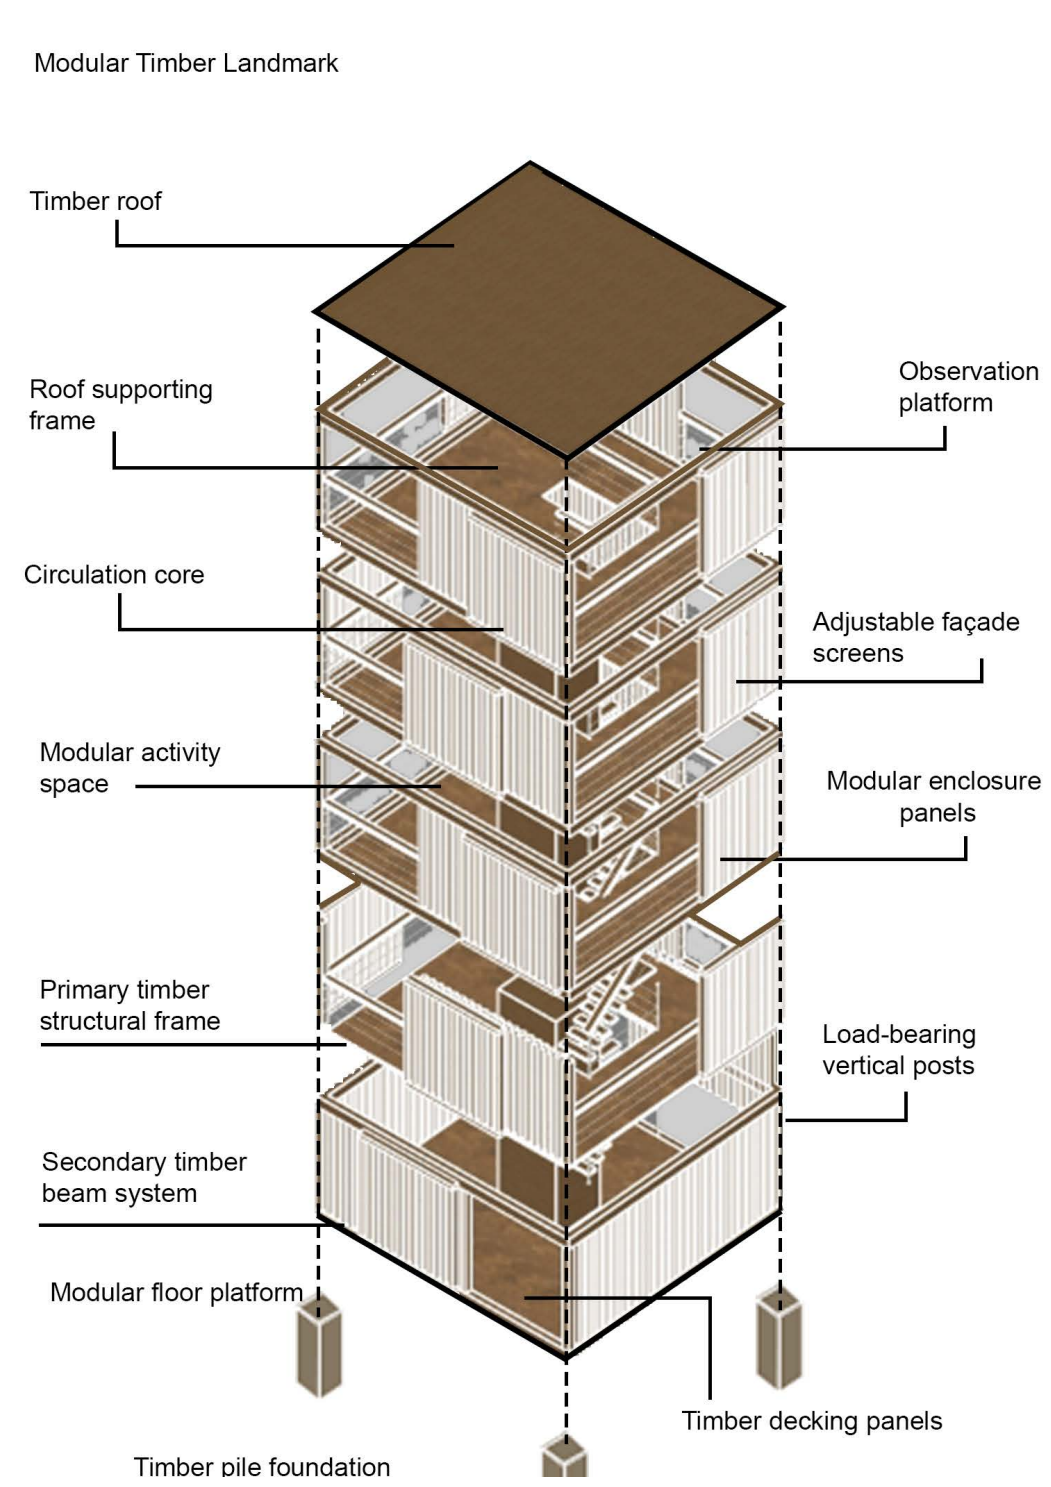

4.3 Small Service Platforms for Rest, Market and Green Buffer

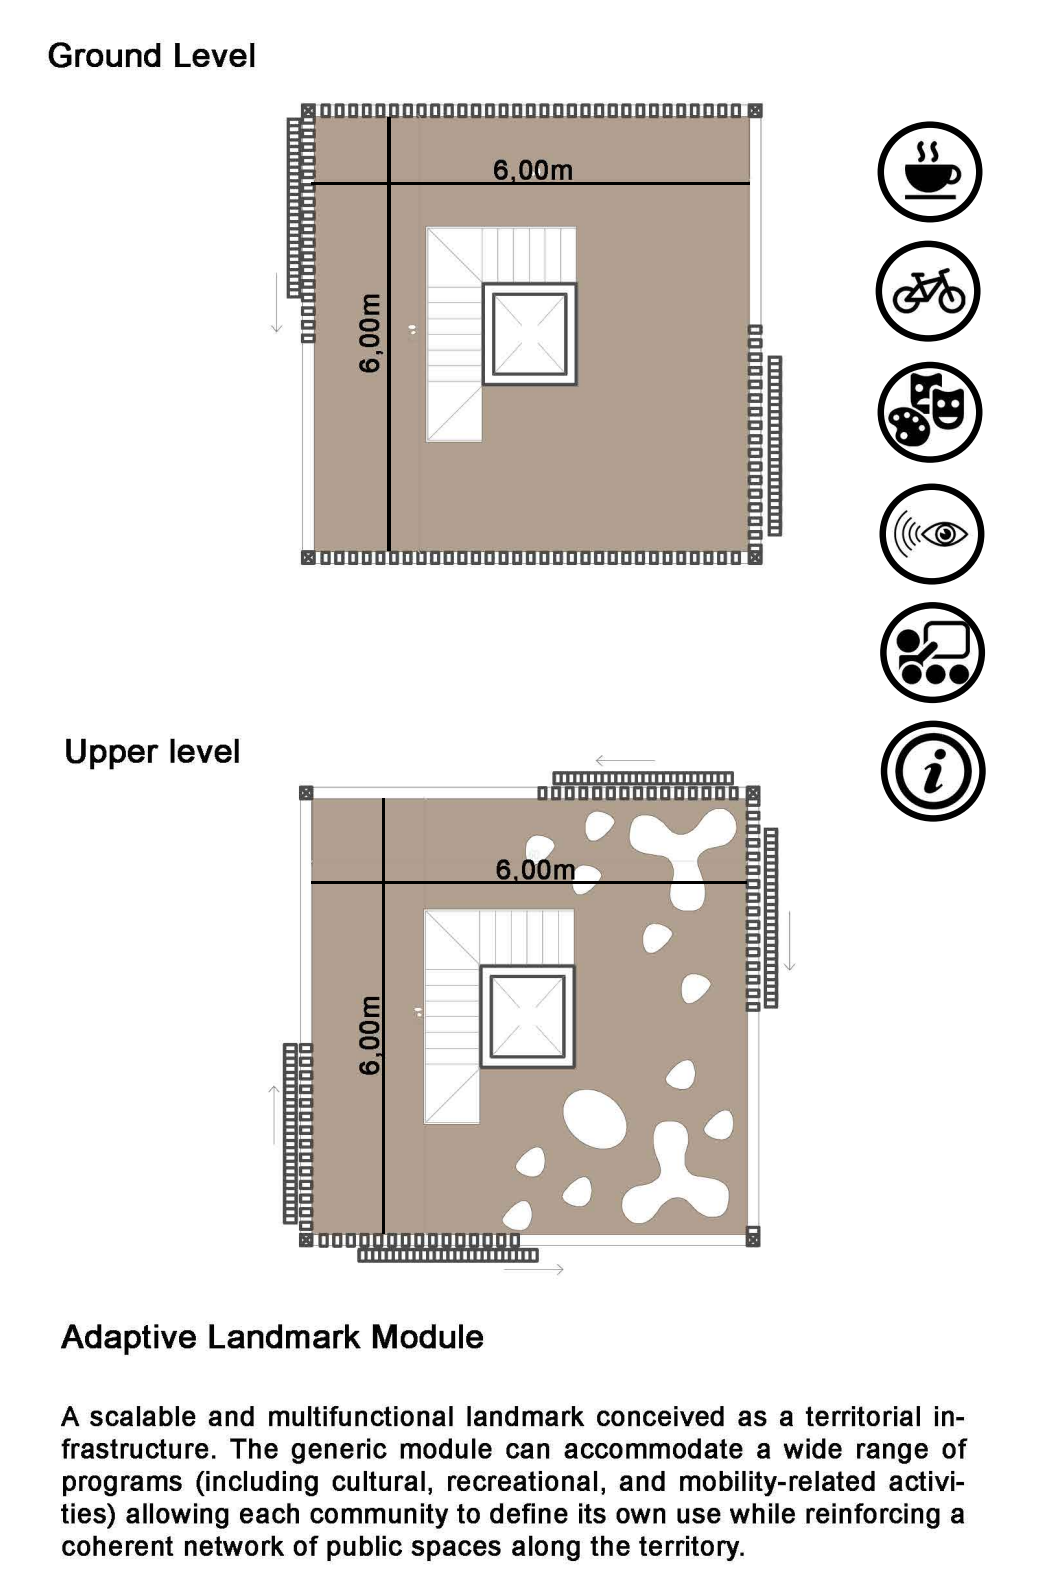

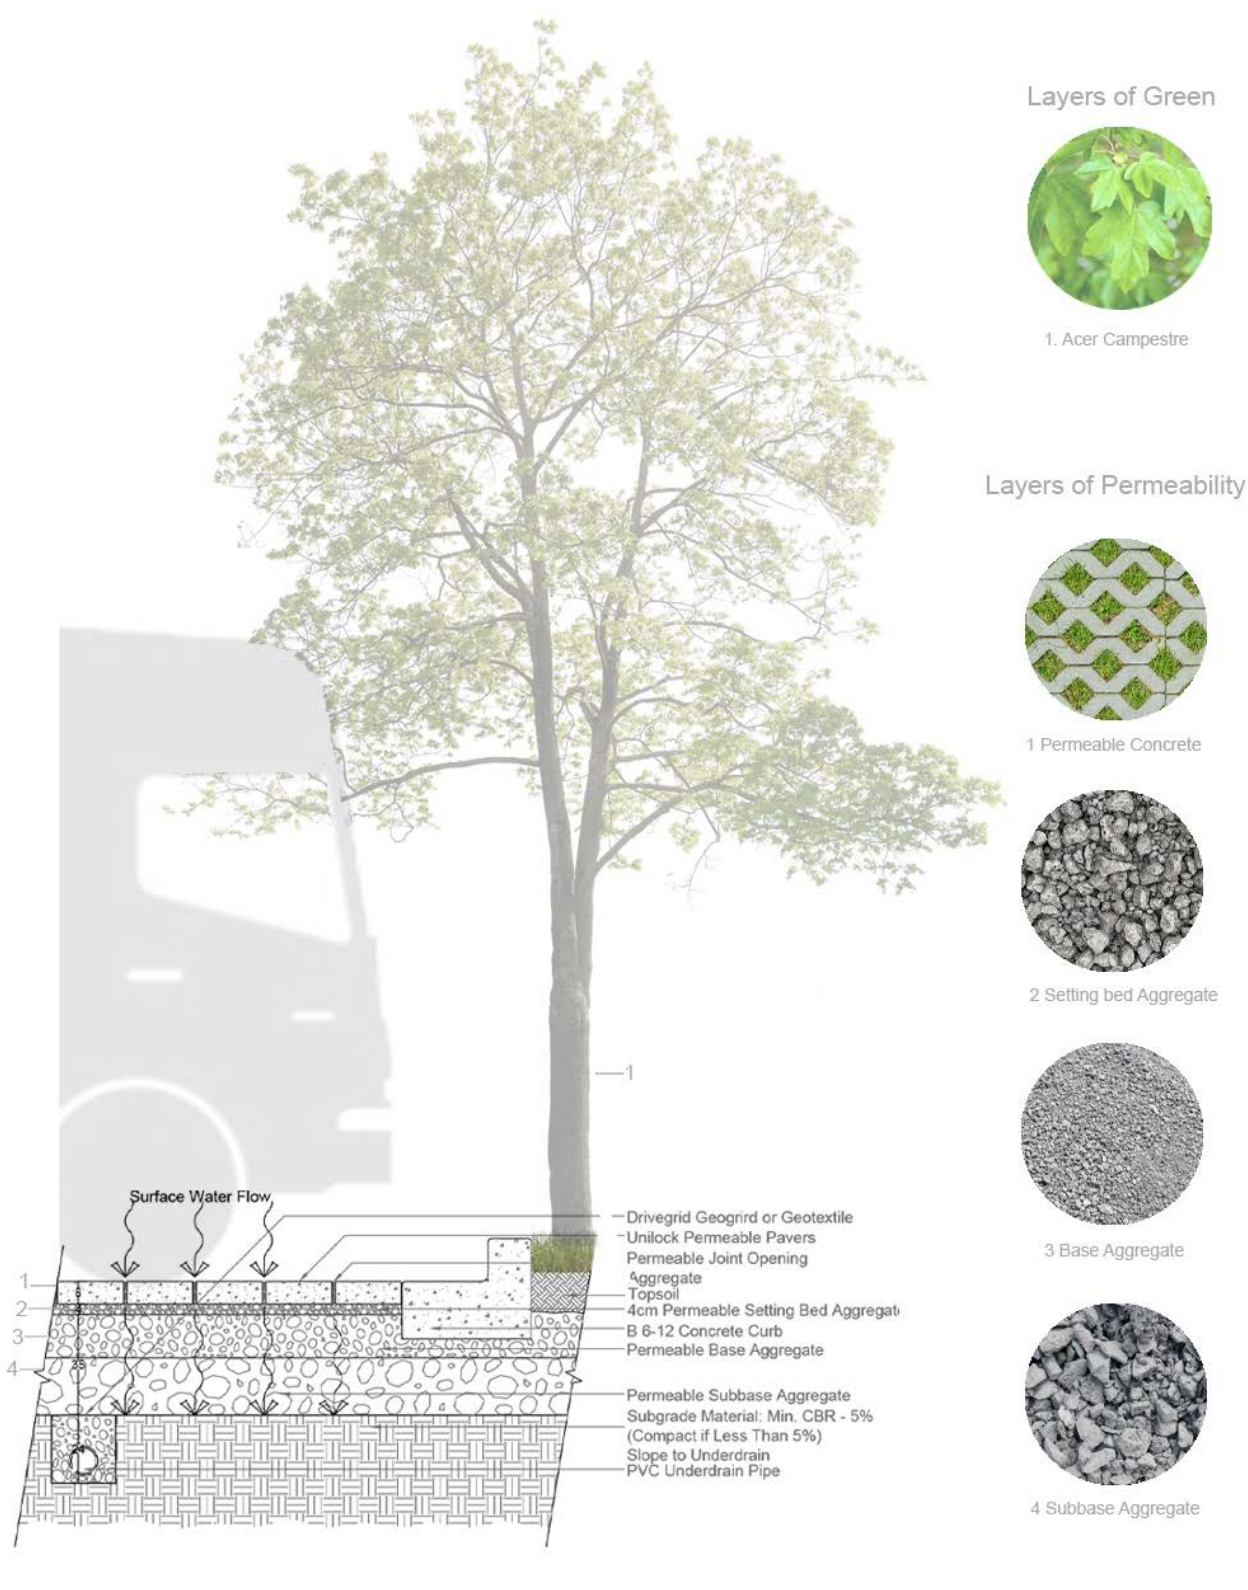

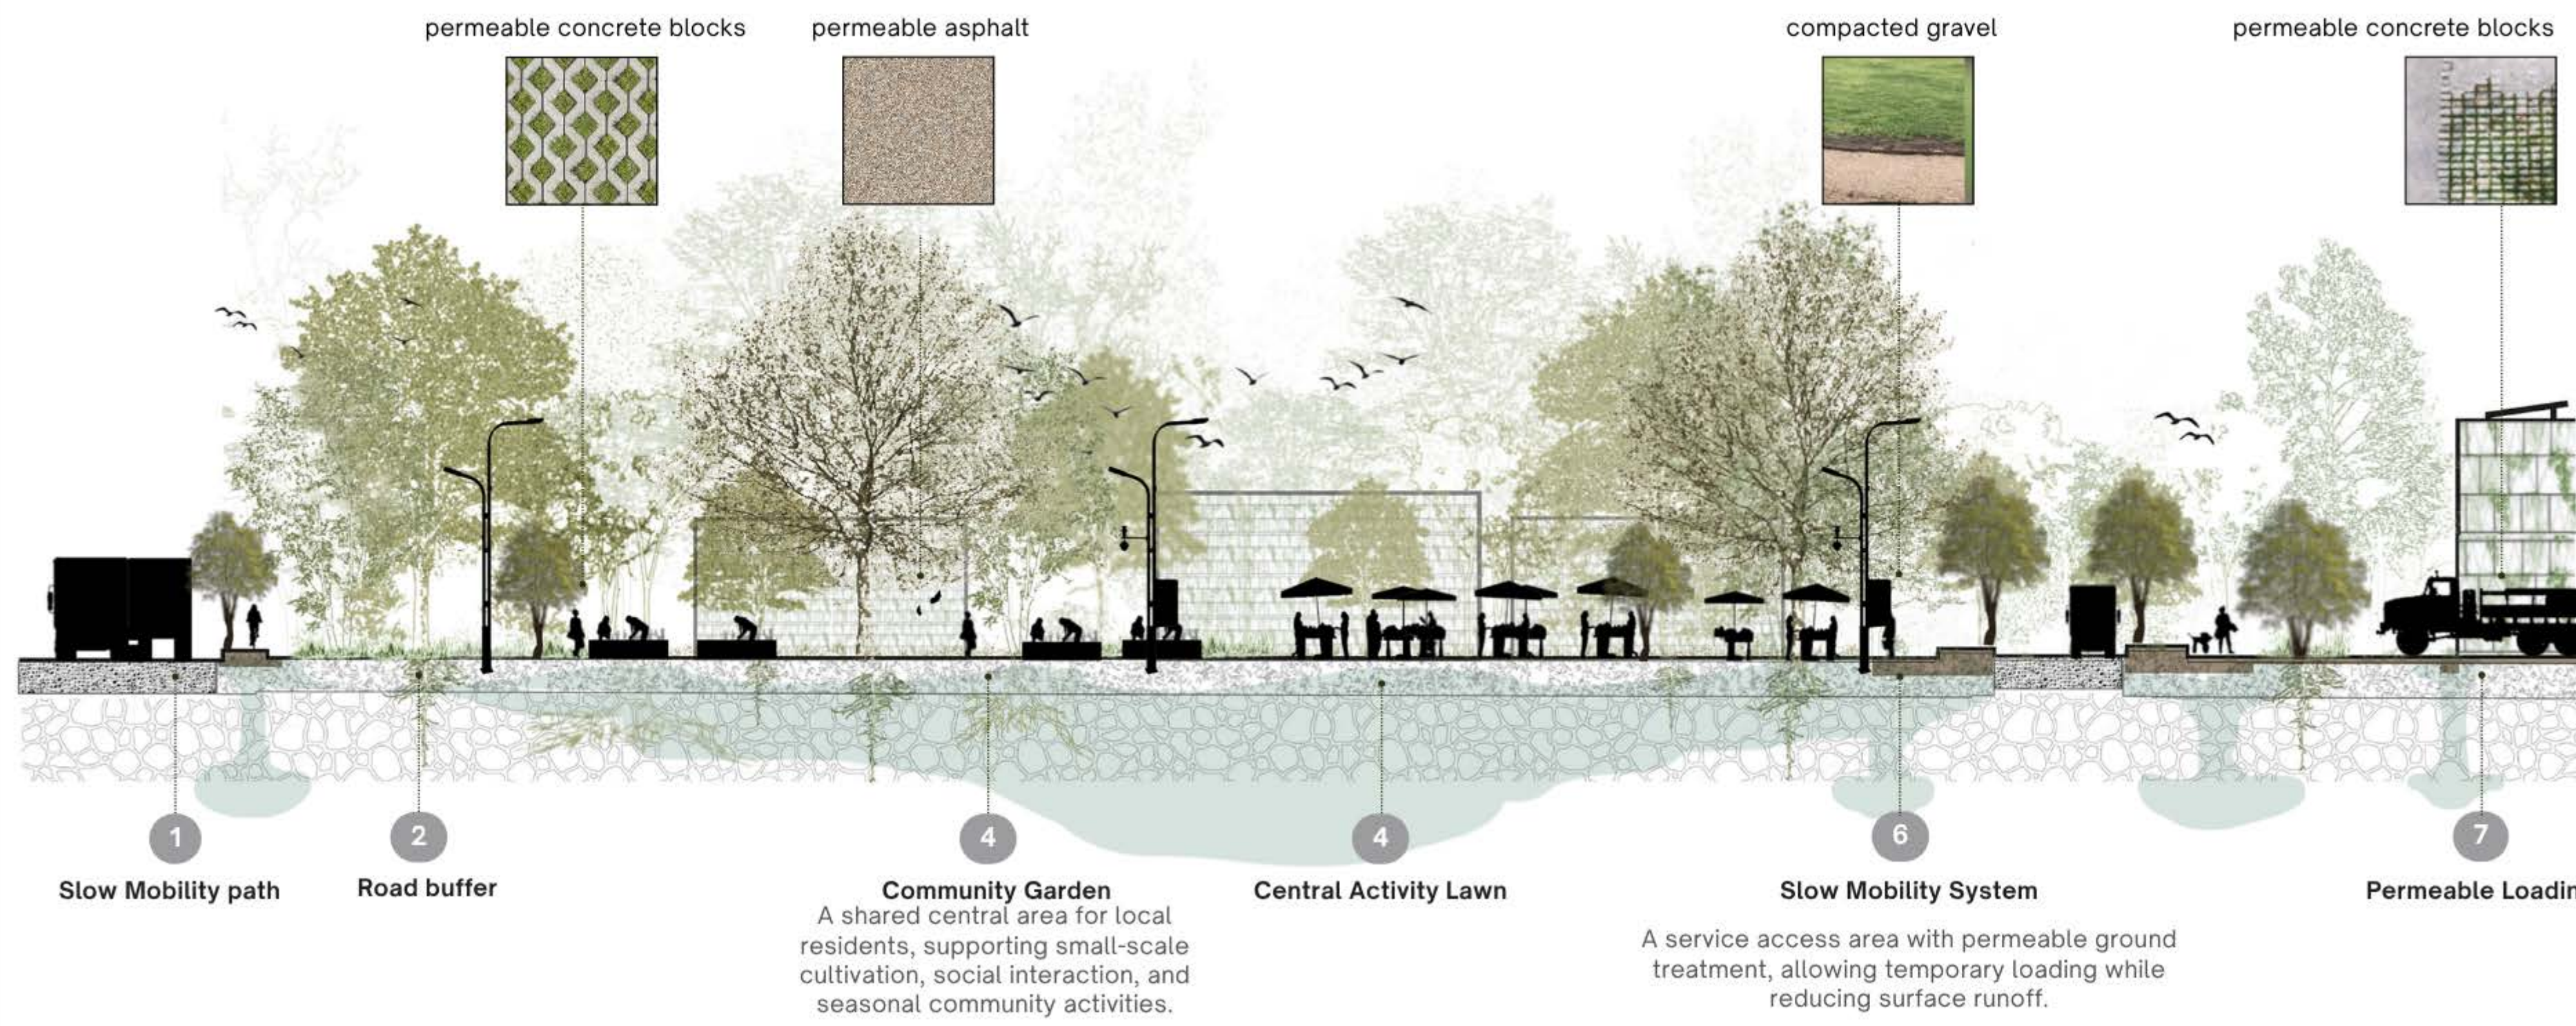

4.5 Bioswale Construction

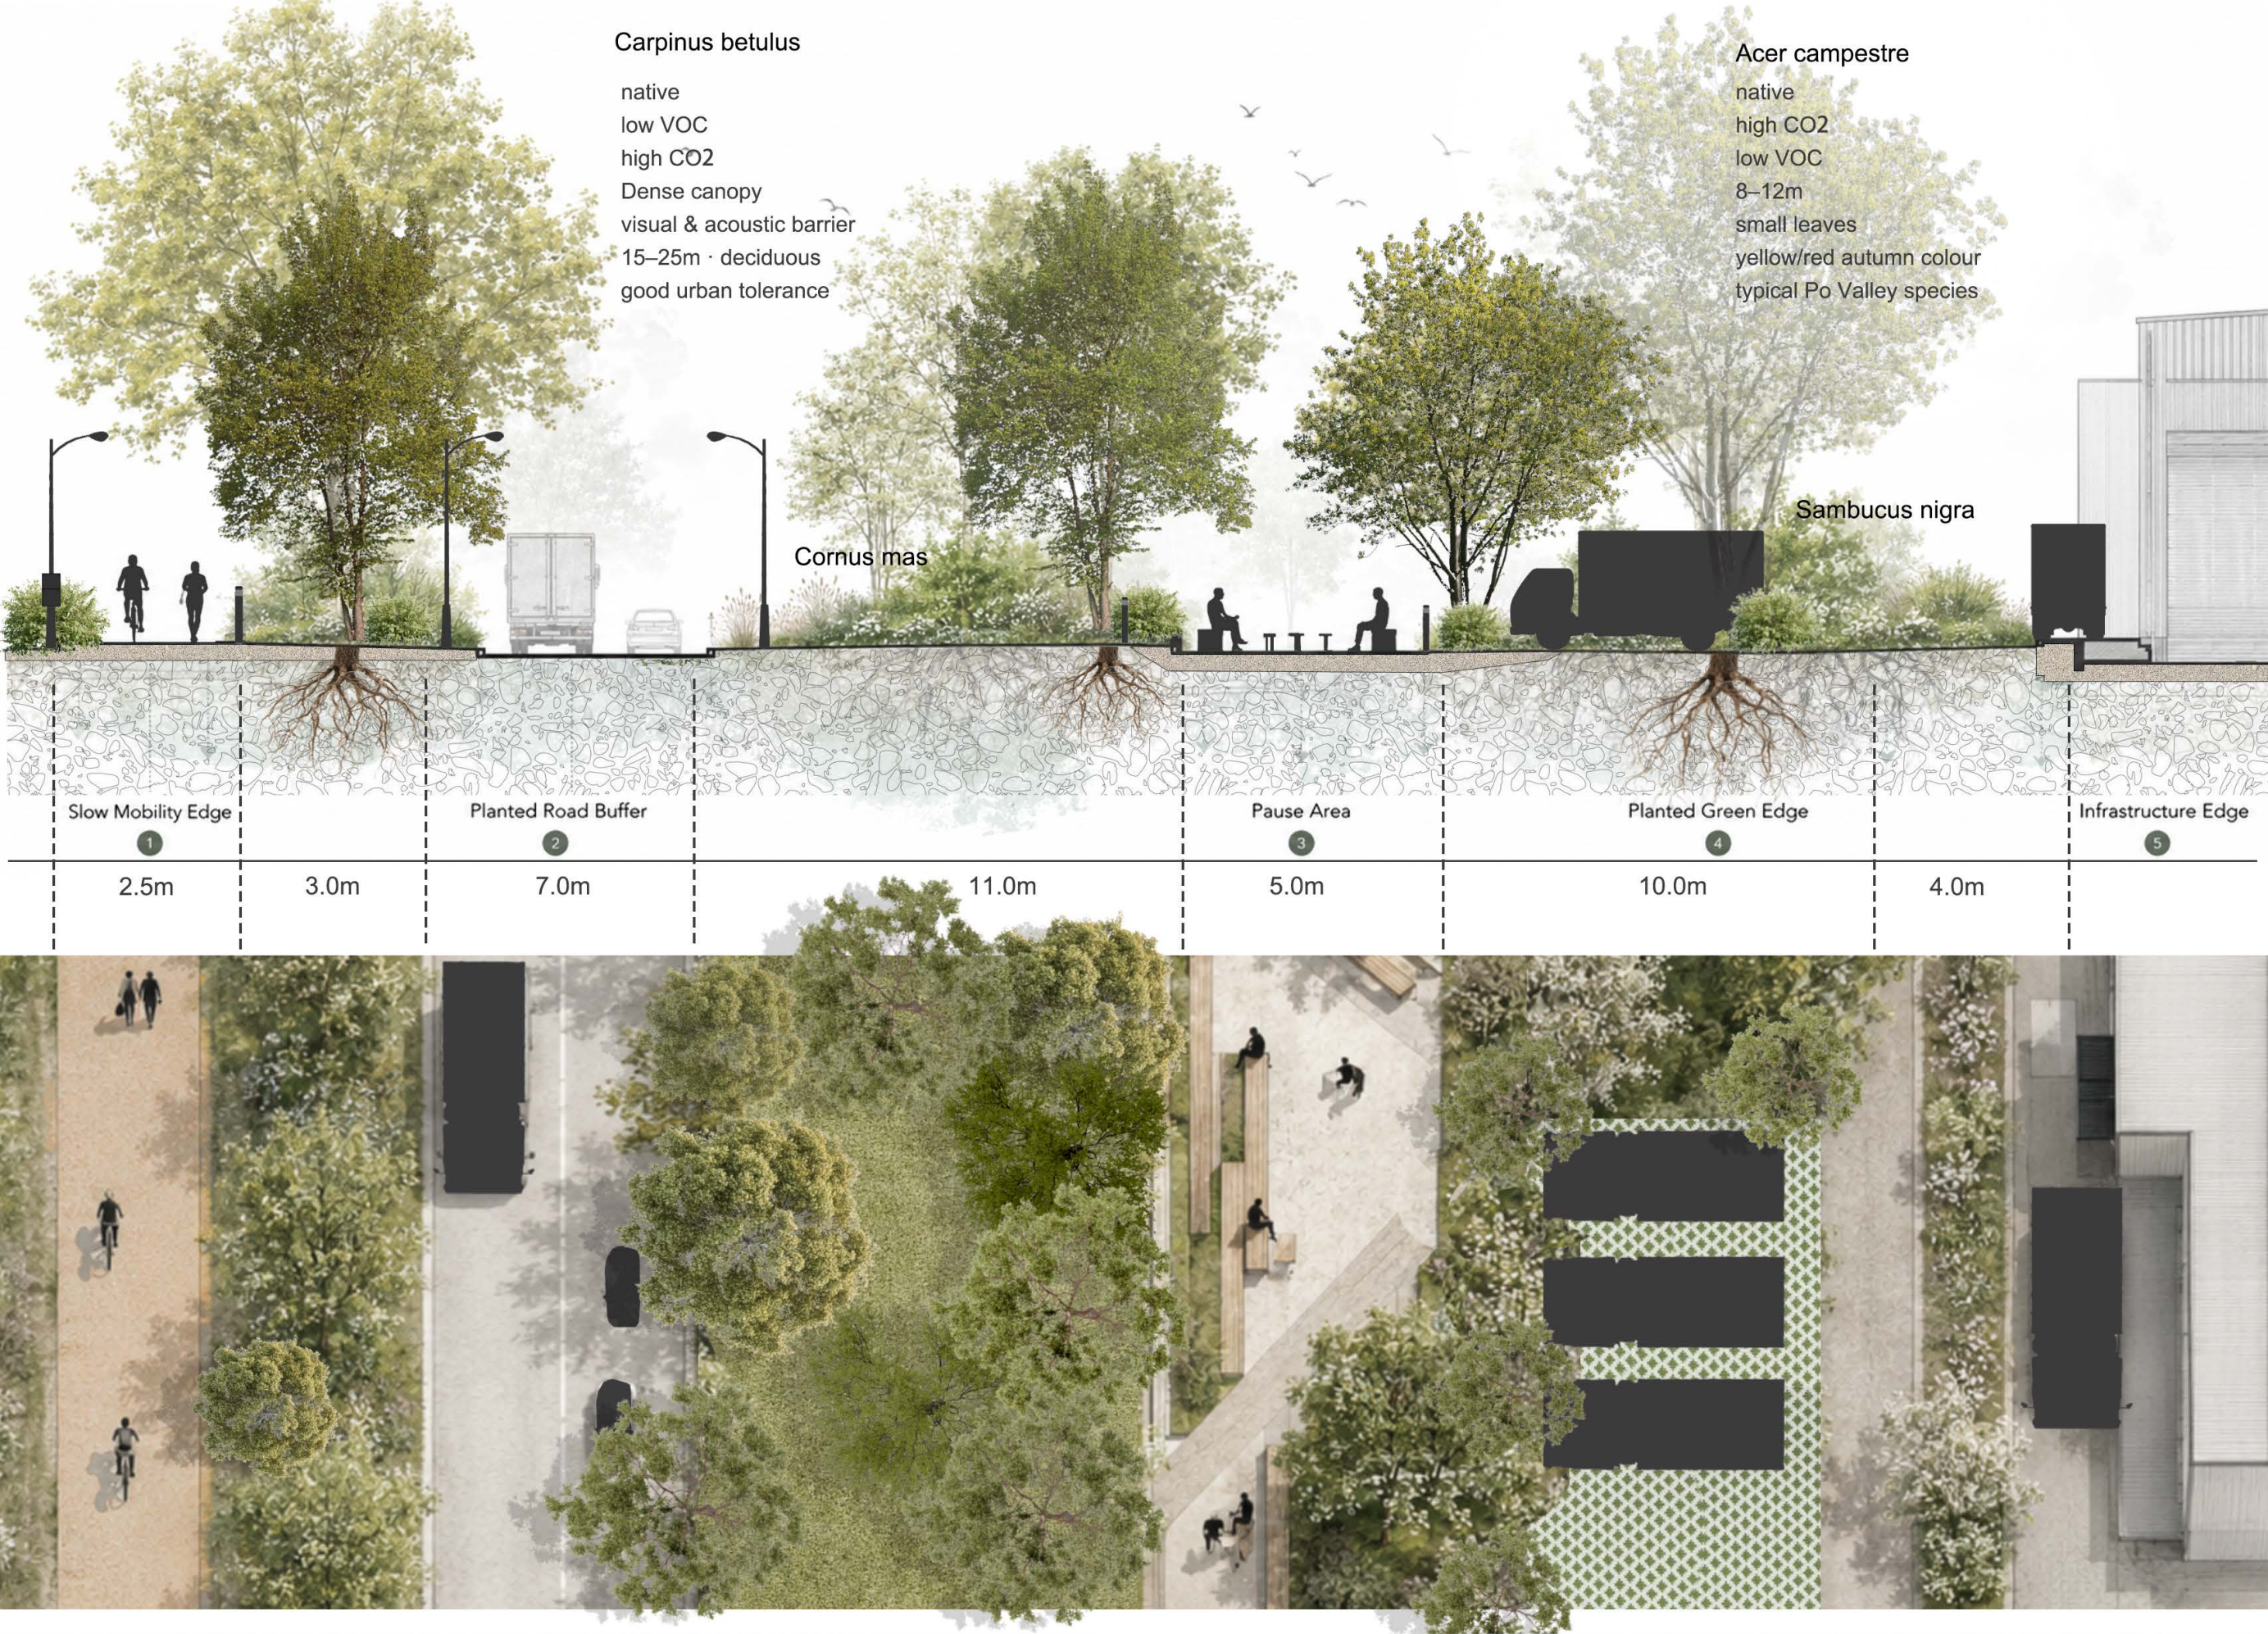

4.6 Service Tower

4.4 Community Hub for Gathering and Agro-Ecological Life

5.1 From Existing Edge to Shared Green Landscape

5.2 Leisure Market Along the Slow Mobility Path

5.3 Linear Garden Between Logistics, Road and Daily Movement
